From the first quote to the QuickBooks entry, in one app.

The Customer Factor is scheduling, estimating and invoicing software for small service businesses: window cleaners, pressure washers, carpet cleaners and maid services. This is how it is put together, and what we'd learn from it if we were building yours.

The Customer Factor

QB
Syncs with QuickBooks Online and Desktop, included in the plan

3
Surfaces: office web app, field apps, customer portal

A service business runs on four tools that don't talk.

A one-van window cleaning company still has to quote, schedule crews, track hours, bill, collect and keep the books. Usually that means a paper diary, a word-processor estimate, a card reader and an evening re-typing everything into QuickBooks.

The usual way

- ✕ Recurring customers live in a diary, and someone has to remember who is due this month
- ✕ Estimates are typed from scratch and emailed as attachments
- ✕ Crews get the day's jobs by phone or text
- ✕ Invoices are written one by one after the work is done
- ✕ Every sale is entered a second time in the accounting software

With The Customer Factor

- ✓ Recurring and one-time jobs sit in a job pool and get dragged onto the schedule
- ✓ Estimates come from templates and go out by email or text
- ✓ Jobs are assigned to an employee or a whole crew, and appear in their app
- ✓ Invoices are created in bulk, and saved cards can pay recurring work automatically
- ✓ Sales flow into QuickBooks Online overnight, or Desktop in a few clicks

Who it's built for

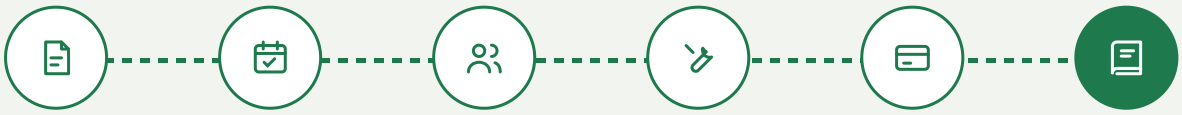

As described by the vendor and its software-directory listings.

Owner-operators and small teams whose revenue is mostly repeat visits to the same addresses. The product is tuned for that rhythm rather than for large field-service fleets.

- Window cleaning
- Pressure washing
- Carpet cleaning
- Maid & cleaning services

How one job moves through the system

Every step below happens inside the product. The only thing that leaves it is the finished sale, on its way to the books.

Estimate
From a template, sent by email or text

Schedule
Dragged from the job pool onto a day

Assign
To an employee or a crew

Do the work
Time tracked in the mobile app

Invoice & pay
In bulk, or auto-charged to a saved card

Books
Synced to QuickBooks

Three surfaces, one customer record.

The same customer, job and price list shows up in three places, each shaped for the person using it.

For the owner and office

Web app

Where the business is planned, priced and billed.

- **Job pool** of recurring and one-time work, with drag-and-drop scheduling
- **Estimate templates** sent by email or text
- **Bulk invoicing** and saved cards for recurring customers
- **Employees and crews** that jobs can be assigned to
- **Service plan pricing** for repeat work

For technicians in the field

iOS & Android apps

The day's work in a pocket, with the paperwork done on site.

- Schedule **jobs, estimates, tasks** and personal appointments
- **Time tracking** per job
- **Invoice generation** from the phone
- Works from the **same customers and jobs** as the office

For the business's customers

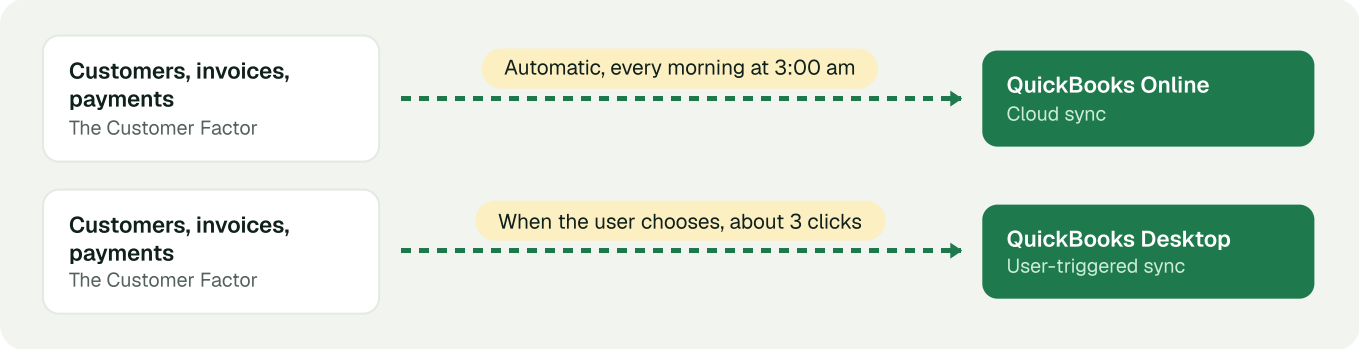

Customer portal

Customers ask for work themselves, inside rules the owner sets.

- Owner picks **which days** can be booked and **which services** can be requested
- Optionally shows **past jobs and pricing**
- Sends an **automatic email and text** after each request, with editable wording

Two roads into the same ledger

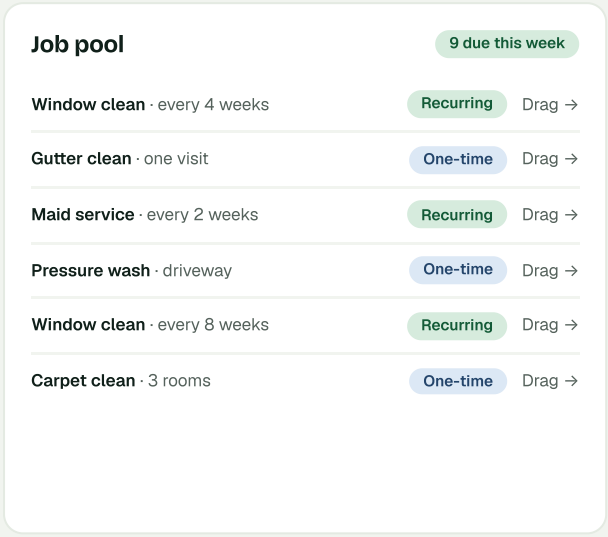

Plenty of small businesses still run QuickBooks Desktop while others have moved to Online, so the product supports both, with the sync included in the subscription. Online is pushed automatically every morning at 3am; Desktop is synced by the user in about three clicks.

The product, screen by screen.

Four moments from a normal working week, redrawn by us from the product's published feature descriptions.

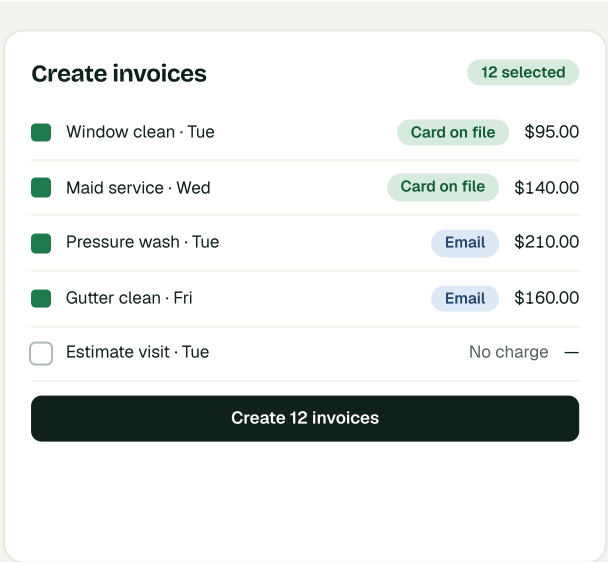

Plan the week from the job pool

Recurring and one-time jobs wait here until they're dragged onto a day and a crew.

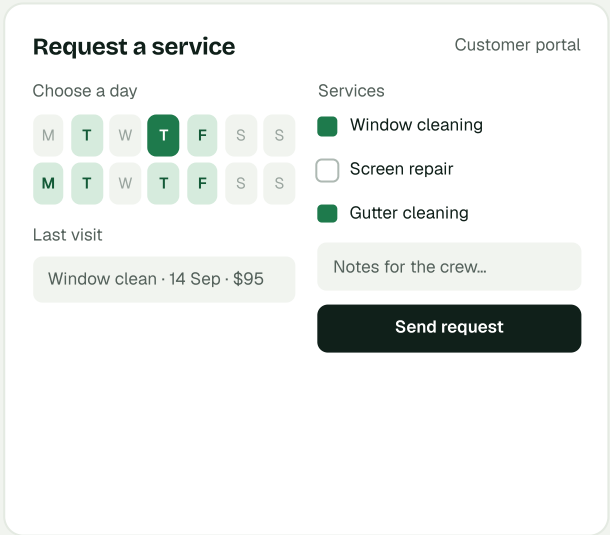

Quote in minutes, not evenings

Line items come from a saved template; the estimate goes out by email or text.

Bill a whole week at once

Invoices are created in bulk; recurring customers with a saved card are charged automatically.

Let customers ask for the next visit

Only the days and services the owner opens are bookable; an email and text confirm the request.

Illustrations by Adroit Infosoft based on the vendor's feature pages and help center. Prices and job names are examples, not customer data.

What makes it interesting to build.

The hard parts of this kind of product aren't the screens. They are the rules underneath them.

Recurring work as data, not reminders

A window round repeats every 4, 6 or 8 weeks. Modelling frequency, service plans and pricing on the job itself is what lets the job pool fill up on its own.

Two accounting integrations, one source of truth

A scheduled cloud push for QuickBooks Online and a user-triggered sync for Desktop. Both must agree on customers, items and payments, and never post twice.

One record, three audiences

Owners, crews and end customers see the same job with different permissions. The portal shows only what the owner chooses: days, services, history and prices.

4.4/5

★★★★★

Capterra, 17 verified reviews: 14 five-star, 1 three-star, 2 one-star.

Value for money	4.5
Features	4.4
Ease of use	4.2
Customer service	4.1

> **"As affordable and customizable for our type of business as any alternative."**
>
> Window cleaning business owner, review on Capterra

Where a next version could go further

- **Navigation and search.** The most common complaint in reviews is that records are hard to find.
- **Route optimization.** Independent guides note it isn't built in, which matters once a business runs several crews.
- **Message delivery.** One reviewer reported client emails not always arriving, a case for delivery tracking.

Available on the web, iOS and Android

Web app

Runs in the browser for the office: scheduling, estimates, invoicing and settings.

iOS

App Store, by The Customer Factor LLC. Requires iOS 15 or later.

Android

Google Play, 10K+ installs. Developer based in Sioux Falls, SD.

Building software for a service business?

Adroit Infosoft designs and builds web and mobile products. Everything in this case study, from recurring scheduling to accounting sync and customer portals, is the kind of system we can build for your company.

Web platforms

Admin dashboards, scheduling, billing and reporting

iOS & Android apps

Field apps for crews, with the same data as the office

Integrations

QuickBooks, payment gateways, email and SMS
