The Customer Factor · Field Ops Solutions

From first quote to QuickBooks, in one app.

Scheduling, estimating and invoicing software built for small service businesses: window cleaners, pressure washers, carpet cleaners and mold services. Here's how it works, and what goes into building something like it.

3 surfaces
Office web app, field app, customer portal

A service business runs on four tools that don't talk.

A solo-tech window cleaning company still has to quote, schedule crews, invoice, and get paid. Most owners duct-tape it together: a phone app for jobs, a spiral notebook, a card reader and an evening re-entering everything into QuickBooks.

The usual way

- Recurring customers live in a diary, and someone has to remember who's due to be booked.
- Estimates are typed from scratch and emailed as attachments.
- Crews get the day's jobs by phone call or text.
- Invoices are chased one by one after the work is done.
- Every sale is entered a second time in the accounting software.

With The Customer Factor

- Recurring and one-time jobs are laid out in plain sight and are dragged onto the schedule.
- Estimates come from templates and go out by email or text.
- Jobs are assigned to an employee or a whole crew, and they see it on their phone.
- Invoices are sent as soon as the work is done and can pay recurring work automatically.
- Sales flow into QuickBooks Online overnight, or Desktop in a few clicks.

Quote, schedule, invoice and sync, without retyping.

The Customer Factor, made by The Customer Factor LLC of Sioux Falls, South Dakota, keeps a service company's customers, jobs, prices and payments in one record. The office plans the week on the web, crews work from iOS and Android apps, and customers can request their next visit and manage payments themselves.

It's built around repeat visits: recurring jobs come back into view once they're due.

Window cleaning · Pressure washing · Carpet cleaning · Mold & cleaning services

Built across three surfaces.

The same customer, job and price list shows up in three places, each shaped for the person using it.

For the owner and office

Web app

Where the business is planned, priced and billed.

- **Drag-and-drop scheduling** from the job pool
- **Walk-thrus** in the owner's words, not a generic checklist
- **Employees and crews** that jobs can be assigned to
- **Service price pricing** for repeat work

For technicians in the field

iOS & Android apps

The day's route, in order, with the paperwork done on site.

- Schedule, **jobs, estimates, notes**, and payment appointments
- **Time tracking** for each job
- **Invoice generation** from the job in one tap
- **Check & Cash**, with daily totals and cheque tracking
- **Appointment reminders** by email and text, on or off

For the business's customers

Customer portal

Customers can log in and themselves. Inside rules the owner sets.

- Pay invoices and **watch days** can be booked and **which services** can be requested
- Optionally, **view past jobs and pricing**
- Requests are **automatic email and text alerts** each request, with editable wording

How a job works, start to finish.

One window-cleaning customer, followed through the product.

As estimate becomes a job in one tap. The invoice is sent as soon as the work is done.

1. **Send the estimate**
The office picks a template, adjusts the line items and sends it to the customer by text or email.
2. **Put it in the job pool**
Once approved, it becomes a job: one-time, or repeating on a set frequency.
3. **Drag it onto the schedule**
When it's time, it's dragged onto a day and assigned to an employee or a crew.
4. **Do the work and track the time**
The crew sees it on their phone, in the order the app and route put it.
5. **Invoice and get paid**
The job is invoiced in bulk with the rest of the week, and charged to a saved card if there is one.
6. **Land in the books**
The sale reaches QuickBooks Online or Sync the next morning, or desktop on the next manual sync.

The product in action.

Four screens where the app does the heavy lifting, from the first minute on site to getting paid.

Job details

Everything about the visit, on one screen.

The crew opens a job and has the customer, the place and the history in front of them.

- Address, phone and email, with the job's type and time
- Status set to open, completed or cancelled
- Notes stamped with who added them and when
- Email, phone, video, sell and invoice from the bottom bar

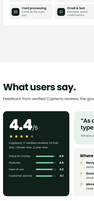

Job Price

Every stage of a visit, timed.

One tap per stage builds an accurate record of the day, without anyone filling in a timesheet.

- Start travel, job arrival, begin job and job completed
- A break button that pauses the clock
- Elapsed time shown against the job

Invoice and signature

Billed and signed before leaving the driveway.

The invoice is generated from the job, and the customer signs on the same phone.

- Invoice built from the job's line items
- Sign, email, text, print or take payment from one toolbar
- Signature captured on screen, with an optional name

Online payment

Customers pay from a link.

Open a single job or a whole week's range entering the service company's own name and logo.

- Payment changes faced with debit, credit and amount
- Customers tick what they want to pay
- Payment completed by credit card

Screens from The Customer Factor's Android app, captured on a test account.

Every screen, in depth.

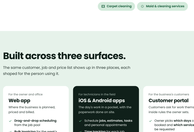

The rest of the app, grouped by what each part of the business does in it.

Customers

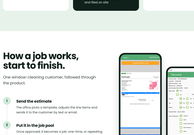

Customer search · Customer details · Photos & documents · Current jobs · Custom fields

Scheduling & Jobs

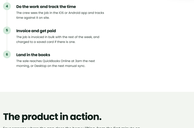

Month calendar · Go! route jobs · Repeat frequency · Add a job · Job history

Estimates & billing

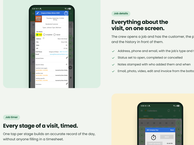

Estimates · Unpaid invoices · Line item · Email a proposal

Messages & checklists

Go! my app · Email templates · Text templates · Job checklist · Tasks

Field tools

Dashboard · New appointment · Job mode · Expense receipt · Personal time

Technically, what makes it interesting.

The hard parts of this kind of product aren't the screens. They are the rules underneath them.

Recurring work as data, not reminders.
A job that repeats "every 4 weeks on Tuesday" is stored as a rule, not a list of dates. Changing frequency, service price and pricing updates every future visit, and the app works out the next one on its own.

Field data the office can trust.
Time, photos and notes made on-site land against each job, and clock-in and daily routes are logged per employee. Nothing is re-typed, and nothing happened on site without having to be told.

One record, three audiences.
The same customer and job record powers work from the same job. The portal shows customers only what the business chooses to share, and the app shows crews only their own jobs and prices.

Two roads into the same ledger.
Sync with QuickBooks Online over the internet, or Desktop via Web Connector. Desktop, and the sync is included in the subscription.

QuickBooks Desktop Web Connector

What it connects to, and how we'd build it.

On the left, what the product publicly supports. On the right, the stack Adroit Infosoft would use to build a product like it today. The Customer Factor doesn't publish its own stack, so we don't guess at it.

Integrations

- **QuickBooks Online** — Two-way sync, included
- **QuickBooks Desktop** — Web Connector, included
- **Card processing** — Built in, by June 7
- **Stripe** — Card & bank payments, online payments
- **Twilio & text** — Reminders, portal invites, payment links

Our recommended build

- **Flutter** — One codebase for iOS & Android
- **Firebase** — Auth, Firestore for offline, & analytics
- **Node.js API** — Web app, sync, QuickBooks & webhooks
- **PostgreSQL** — Customers, jobs, invoices & payments
- **Stripe** — Card & bank payments, Connect
- **Twilio & push** — Reminders, portal invites, payment links

What users say.

Feedback from verified Capterra reviews, the good and the honest.

4.4/5

Capterra · 37 verified reviews · 5 five-star · 3 four-star · 0 one-star

Value for money	4.5
Features	4.4
Ease of use	4.5
Customer service	4.7

"As affordable and customizable for our type of business as any alternative."
Window cleaning business owner, verified review on Capterra

Where a next version could go further

- **Navigation and search.** The most common complaint in reviews is that records are hard to find.
- **Route optimization.** Independent guides rank it well built in, which matters for crews with many stops a day.
- **Message delivery.** One reviewer reported client emails not always arriving, a case for delivery tracking.
