Office on the web, crews on iOS and Android

A service business runs on four tools that don't talk.

A small window cleaning company still has to quote, schedule crews, bill, get paid and keep the books. Usually that means a paper diary, a typed estimate, a card reader and an evening re-typing it all into QuickBooks.

The usual way

- Recurring customers live in a diary, and someone has to remember who is due this month.
- Estimates are typed from scratch and emailed as attachments.
- Crews get the day's jobs by phone call or text.
- Invoices are written one by one after the work is done.
- Every sale is entered a second time in the accounting software.

With The Customer Factor

- Recurring and one-time jobs wait in a job pool and are dragged onto the schedule.
- Estimates come from templates and go out by email or text.
- Jobs are assigned to an employee or a whole crew and shown up in their app.
- Invoices are created in bulk, saved cards can pay, recurring work automatically.
- Sales flow into QuickBooks Online overnight, or Desktop in a few clicks.

The Customer Factor keeps a service company's customers, jobs, prices and payments together, so the details are never typed twice.

One record for the whole business.

It's built around repeat visits, which is why it fits trades where the same customers book again and again.

Window cleaning Pressure washing Carpet cleaning

Maid & cleaning services

Built across three surfaces.

The office, the crews and their customers each get a view built for what they do.

Desktop and office
Web app
Where the business is planned, priced and billed.

- **Drag-and-drop scheduling** from the job pool
- **Employees and crews** that jobs can be assigned to
- **Service plan pricing** for repeat work
- **Accounting** linked to QuickBooks Online or Desktop

Crews and field work
iOS & Android apps
The day's work in a pocket, with the paperwork done on site.

- Schedule, **jobs**, **estimates**, **tasks** and personal appointments
- **Time tracking** for each job
- **Invoice generation** from the phone
- **Check it/out**, with daily route and mileage tracking
- **Customer receipts** photographed and filed on site

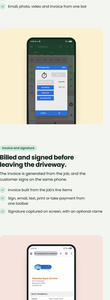

For the customer's browser
Customer portal
Customers ask for work themselves, inside rules the owner sets.

- Owner picks **which days** can be booked and **which services** can be requested
- Customers choose **past jobs** to repeat in one click
- Service an **automatic email and text** after each request, with editable wording

How a job works, start to finish.

One window-cleaning customer, followed through the product.

1. **Send the estimate**
The office picks a template, adjusts the line items and sends it to the customer by text or email.
2. **Put it in the job pool**
Once approved, it becomes a job: one-time, or repeating on a set frequency.
3. **Drag it onto the schedule**
When it's due, the job is dragged onto a day and assigned to an employee or a crew.
4. **On the work and track the time**
The crew sees the job in the iOS or Android app and tracks time against it on site.
5. **Invoice and get paid**
The invoice is paid on the spot by card, check or cash, or a saved card is charged for repeat work.
6. **Land in the books**
The payment flows into QuickBooks with the rest of the day's work.

An estimate becomes a job in one tap, the invoice is paid on site.

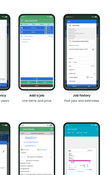

The product in action.

Four screens that carry a visit, from the first minute on site to getting paid.

Job details
Everything about the visit, on one screen.
The crew opens a job and has the customer, the place and the history in front of them.

- Address, phone, email, job type and time
- Status set to open, completed or cancelled
- Notes stamped with who added them and when
- Email, photo, video and invoice from one bar

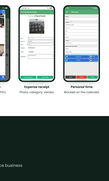

Job timer
Every stage of a visit, timed.
One tap per stage builds an accurate record of the day, without anyone filling in a timesheet.

- Start travel, job arrival, begin job and job completed
- A break button that pauses the clock
- Elapsed time shown against the job

Invoice and signature
Billed and signed before leaving the driveway.
The invoice is generated from the job, and the customer signs on the same phone.

- Invoice built from the job's line items
- Sign, email, text, print or take payment from one interface
- Signature captured on screen, with an optional name

Online payment
Customers pay from a link.
Open charges give out a payment page carrying the service company's own name and logo.

- Recent charges listed with date, status and amount
- Customers tick what they want to pay
- Payment completed by credit card

Every screen, in depth.

The rest of the app, grouped by what each part of the business does in it.

Technically, what makes it interesting.

What sits underneath the screens, and what it saves a service business every week.

Repeat work that schedules itself

Each job keeps its own frequency and price. When it's due again, it comes back ready to schedule, so no repeat customer is forgotten.

Books that stay up to date

Works with QuickBooks Online and QuickBooks Desktop, with the sync direction chosen per account. Customers, payments and sales tax messages are built in, so nothing is typed twice.

Find hours, without timesheets

Crews tap travel, arrival, start and finish on each job, and close the end-of-route sea logged per employee, so the owner sees real hours worked.

One job record for everyone

The office, the crew's app and the customer portal all use the same job. Customers only see what the owner chooses: available days, services, past jobs and prices.

Customers receive payments in one click

Automatic sales invoicing, at 2:00 pm

QuickBooks Online supported

Customers receive payments in one click

Sales Receipt created, about 2:00pm
