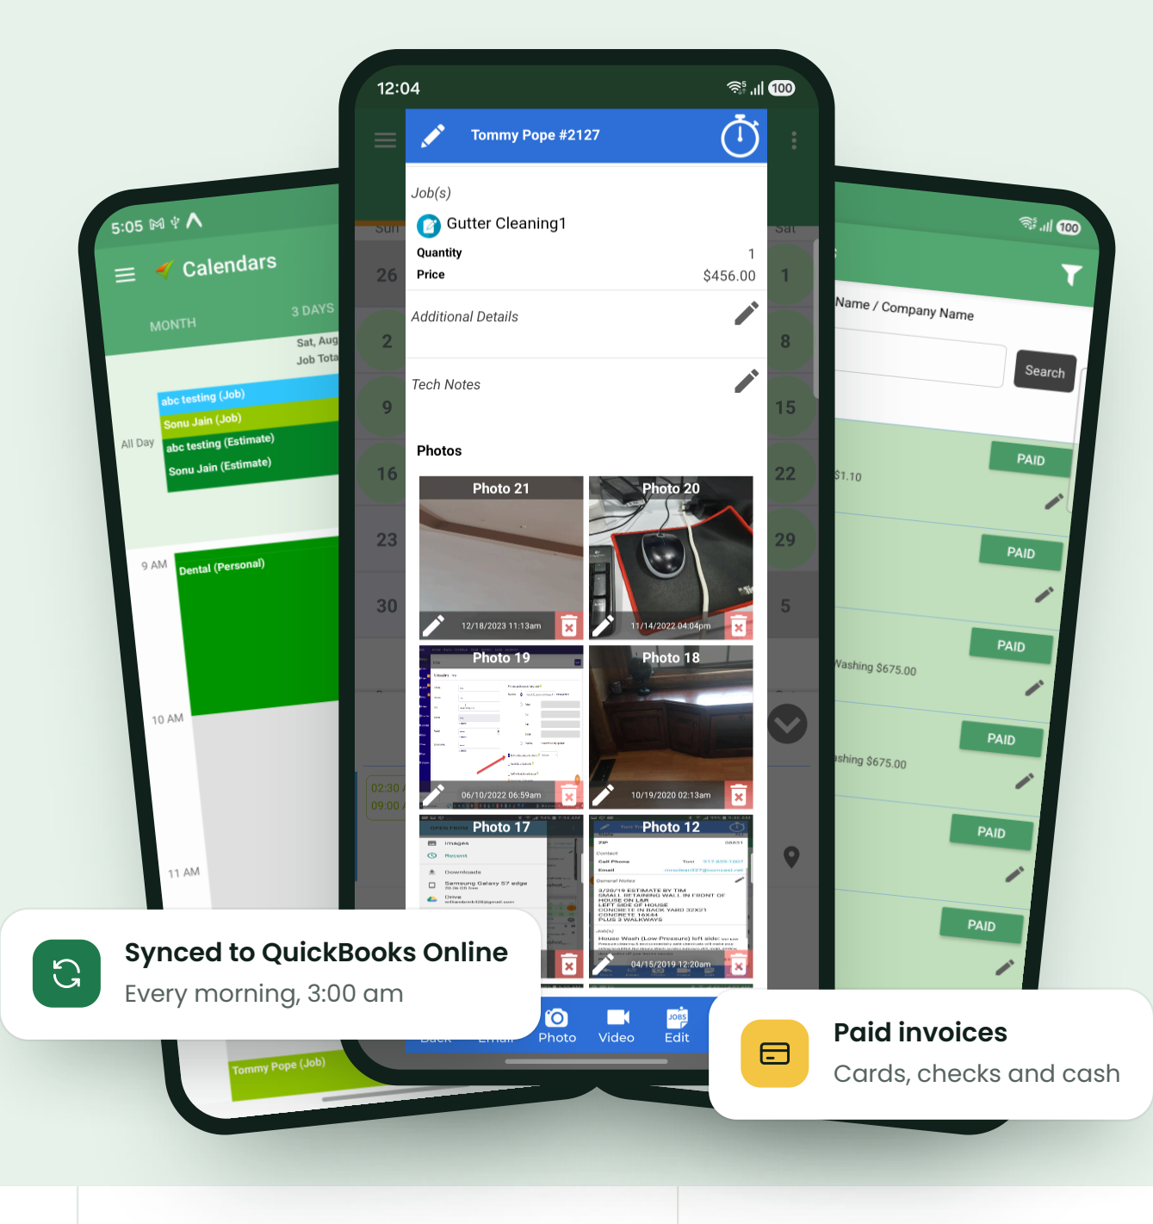
**The Customer Factor** · Web, iOS & Android

# From first quote to QuickBooks, in one app.

Scheduling, estimating and invoicing software built for small service businesses: window cleaners, pressure washers, carpet cleaners and maid services. Here's how it works, and what goes into building something like it.

- Recurring jobs
- Estimates by text
- Bulk invoicing
- QuickBooks sync
- Crews
- Customer portal



**Synced to QuickBooks Online**
Every morning, 3:00 am

**Paid invoices**
Cards, checks and cash

| 4.4/5 | 10K+ | QuickBooks | 3 surfaces |

| Capterra rating from 17 verified reviews | Android installs on Google Play | Online and Desktop sync, included in the subscription | Office web app, field apps, customer portal |

## A service business runs on four tools that don't talk.

A one-van window cleaning company still has to quote, schedule crews, track hours, bill, collect and keep the books. Usually that means a paper diary, a typed estimate, a card reader and an evening re-entering everything into QuickBooks.

### The usual way

- ✗ Recurring customers live in a diary, and someone has to remember who is due this month
- ✗ Estimates are typed from scratch and emailed as attachments
- ✗ Crews get the day's jobs by phone call or text
- ✗ Invoices are written one by one after the work is done
- ✗ Every sale is entered a second time in the accounting software

### With The Customer Factor

- ✓ Recurring and one-time jobs wait in a job pool and are dragged onto the schedule
- ✓ Estimates come from templates and go out by email or text
- ✓ Jobs are assigned to an employee or a whole crew and show up in their app
- ✓ Invoices are created in bulk; saved cards can pay recurring work automatically
- ✓ Sales flow into QuickBooks Online overnight, or Desktop in a few clicks

## Quote, schedule, invoice and sync, without retyping.

The Customer Factor, made by The Customer Factor LLC of Sioux Falls, South Dakota, keeps a service company's customers, jobs, prices and payments in one record. The office plans the week on the web, crews work from iOS and Android apps, and customers can request their next visit through a portal.

It's built around repeat visits: recurring jobs come back into view when they're due.

- Window cleaning
- Pressure washing
- Carpet cleaning
- Maid & cleaning services

## Built across three surfaces.

The same customer, job and price list shows up in three places, each shaped for the person using it.

For the owner and office

### Web app

Where the business is planned, priced and billed.

- ✓ **Drag-and-drop scheduling** from the job pool
- ✓ **Bulk invoicing** for the week's work
- ✓ **Employees and crews** that jobs can be assigned to
- ✓ **Service plan pricing** for repeat work

For technicians in the field

### iOS & Android apps

The day's work in a pocket, with the paperwork done on site.

- ✓ Schedule **jobs, estimates, tasks** and personal appointments
- ✓ **Time tracking** for each job
- ✓ **Invoice generation** from the phone
- ✓ **Clock in/out**, with daily route and mileage tracking
- ✓ **Expense receipts** photographed and filed on site

For the business's customers

### Customer portal

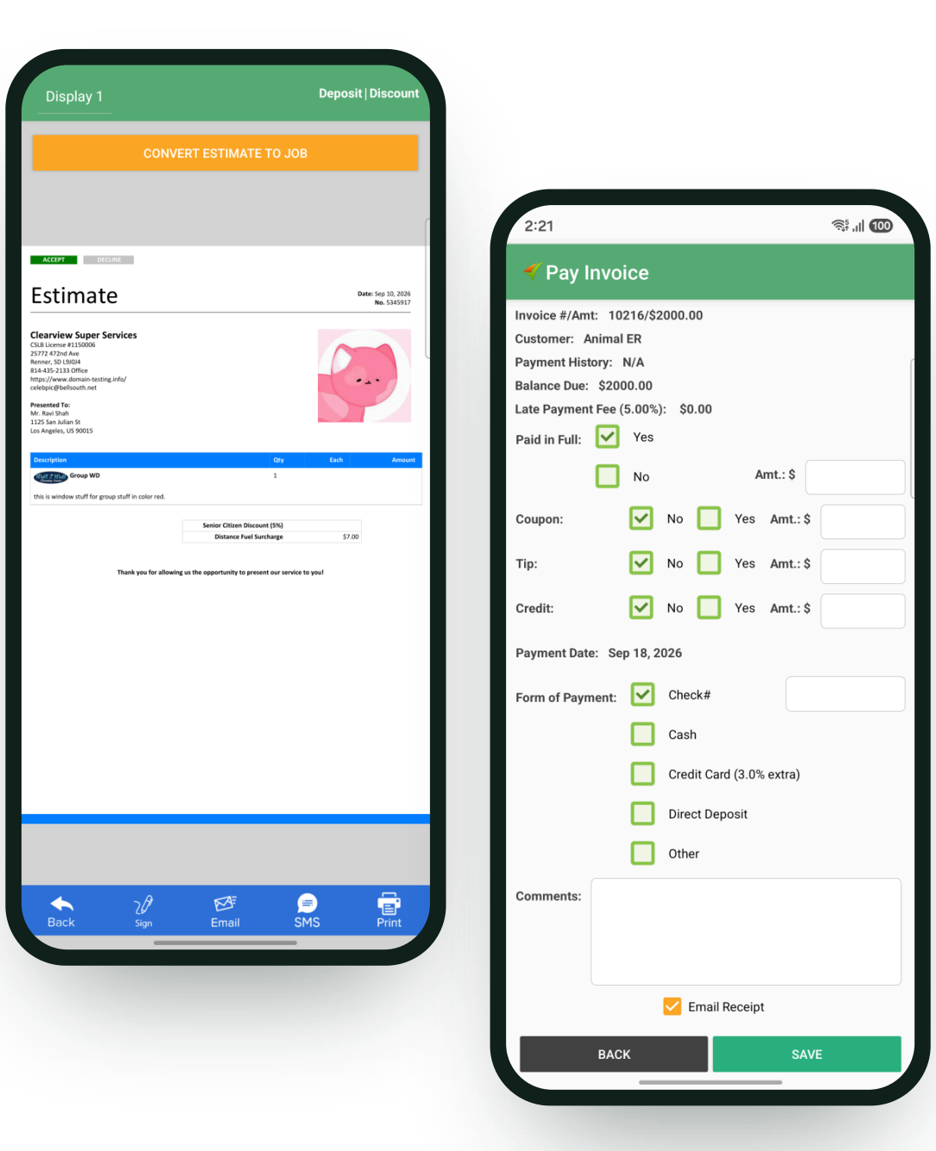
Customers ask for work themselves, inside rules the owner sets.

- ✓ Owner picks **which days** can be booked and **which services** can be requested
- ✓ Optionally shows **past jobs and pricing**
- ✓ Sends an **automatic email and text** after each request, with editable wording

## How a job works, start to finish.

One window-cleaning customer, followed through the product.

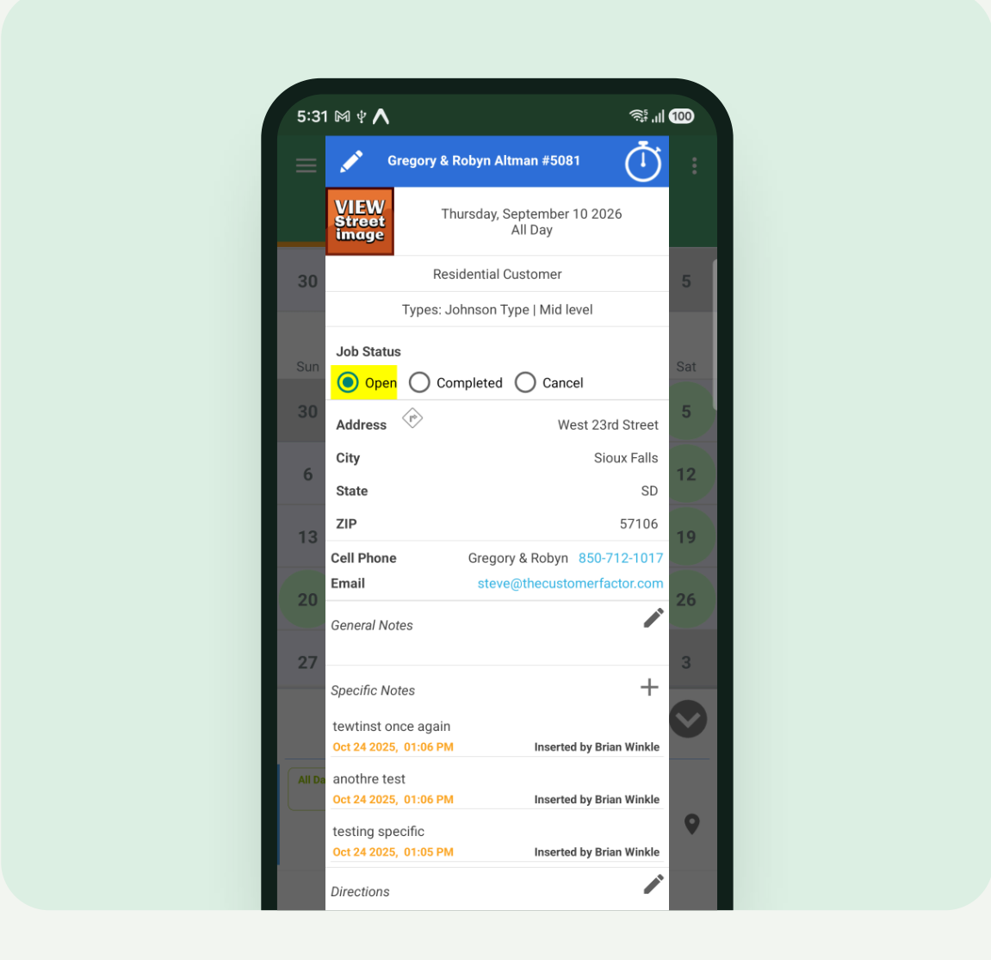
1. **Send the estimate**
   The office picks a template, adjusts the line items and sends it to the customer by text or email.
2. **Put it in the job pool**
   Once approved, it becomes a job: one-time, or repeating on a set frequency.
3. **Drag it onto the schedule**
   When it's due, the job is dragged onto a day and assigned to an employee or a crew.
4. **Do the work and track the time**
   The crew sees the job in the iOS or Android app and tracks time against it on site.
5. **Invoice and get paid**
   The job is invoiced in bulk with the rest of the week, and charged to a saved card if there is one.
6. **Land in the books**
   The sale reaches QuickBooks Online at 3am the next morning, or Desktop on the next manual sync.



An estimate becomes a job in one tap; the invoice is paid on site.

## The product in action.

Four screens where the app does the heavy lifting, from the first minute on site to getting paid.



Job details

### Everything about the visit, on one screen.

The crew opens a job and has the customer, the place and the history in front of them.

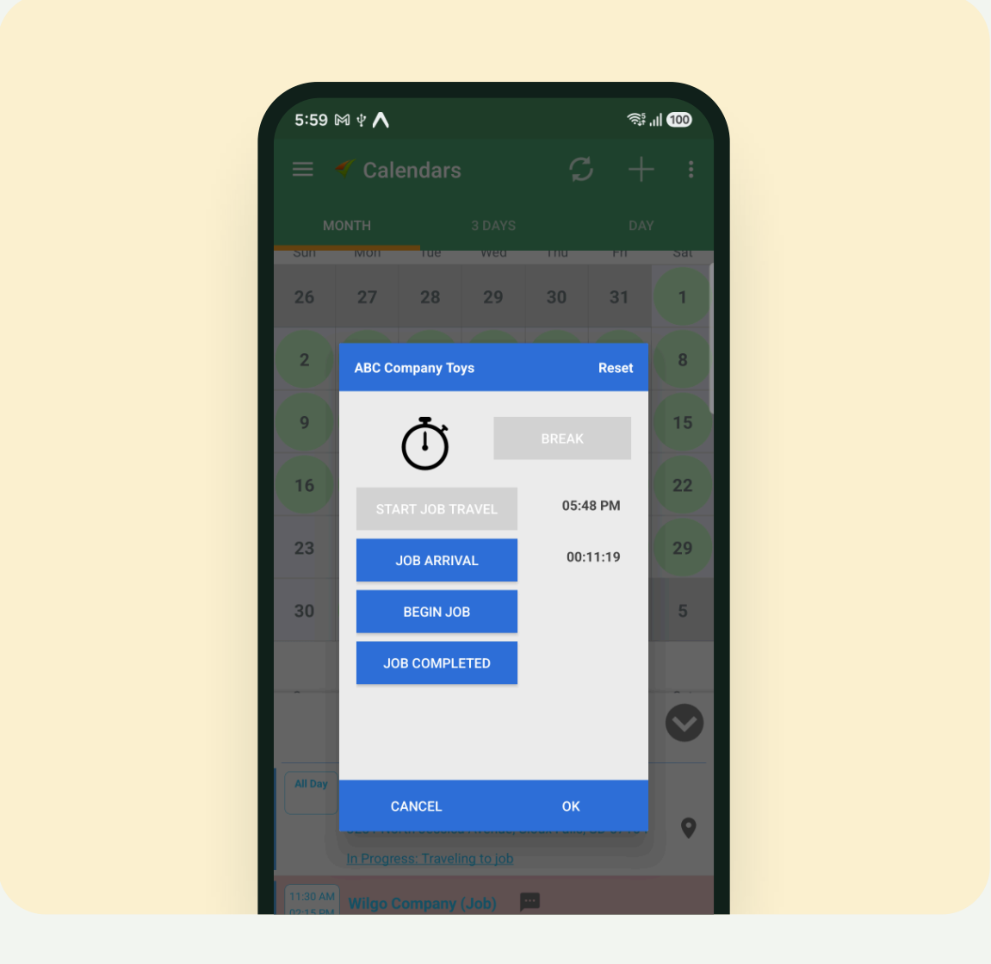
- ✓ Address, phone and email, with the job's type and time
- ✓ Status set to open, completed or cancelled
- ✓ Notes stamped with who added them and when
- ✓ Email, photo, video, edit and invoice from the bottom bar

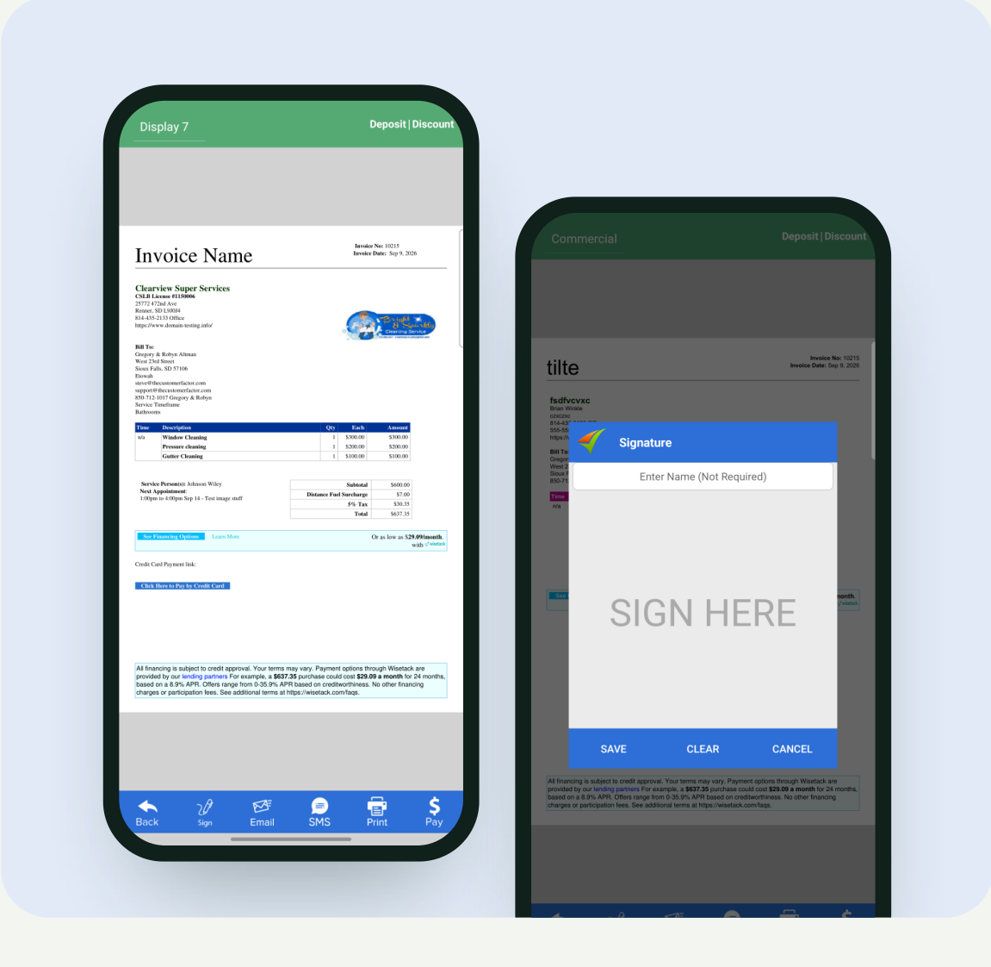
Job timer

### Every stage of a visit, timed.

One tap per stage builds an accurate record of the day, without anyone filling in a timesheet.

- ✓ Start travel, job arrival, begin job and job completed
- ✓ A break button that pauses the clock
- ✓ Elapsed time shown against the job





Invoice and signature

### Billed and signed before leaving the driveway.

The invoice is generated from the job, and the customer signs on the same phone.

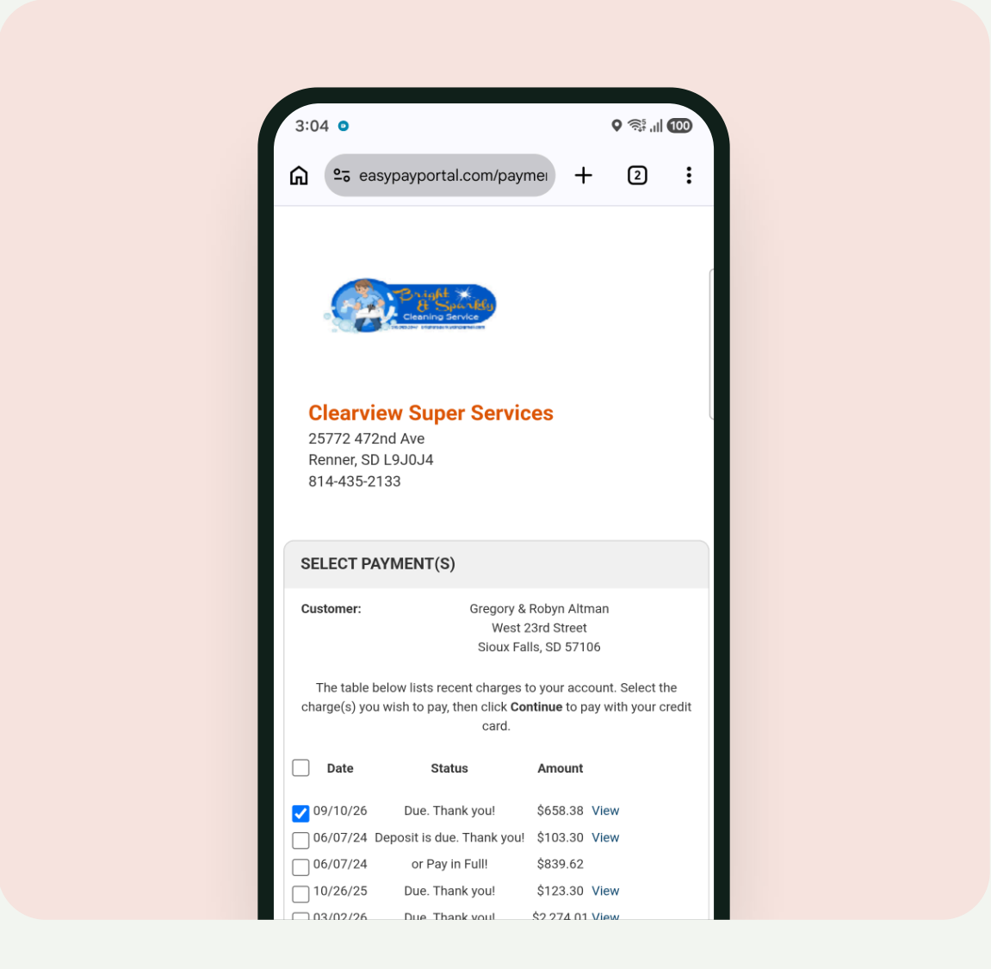
- ✓ Invoice built from the job's line items
- ✓ Sign, email, text, print or take payment from one toolbar
- ✓ Signature captured on screen, with an optional name

Online payment

### Customers pay from a link.

Open charges go out as a payment page carrying the service company's own name and logo.

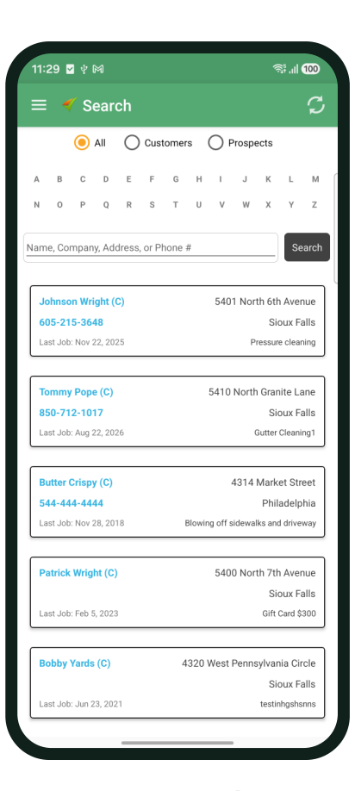
- ✓ Recent charges listed with date, status and amount
- ✓ Customers tick what they want to pay
- ✓ Payment completed by credit card



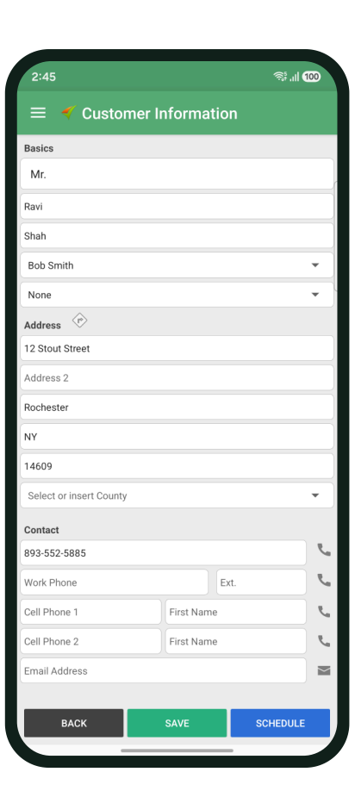
## Every screen, in depth.

The rest of the app, grouped by what each part of the business does in it.

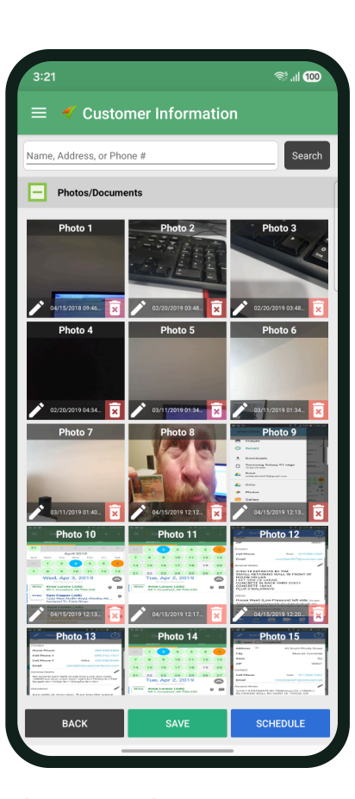
### Customers



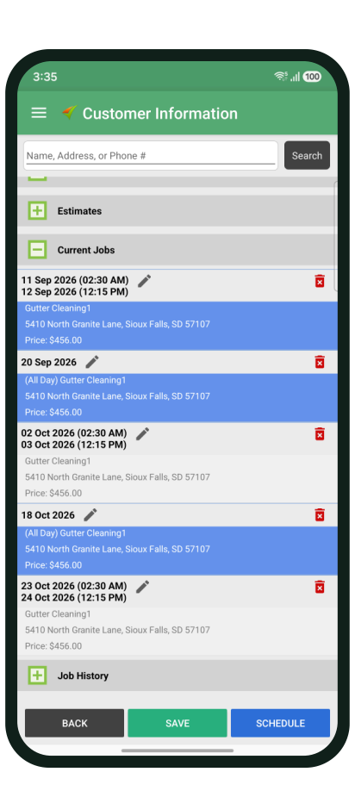
**Customer search**
Customers and prospects



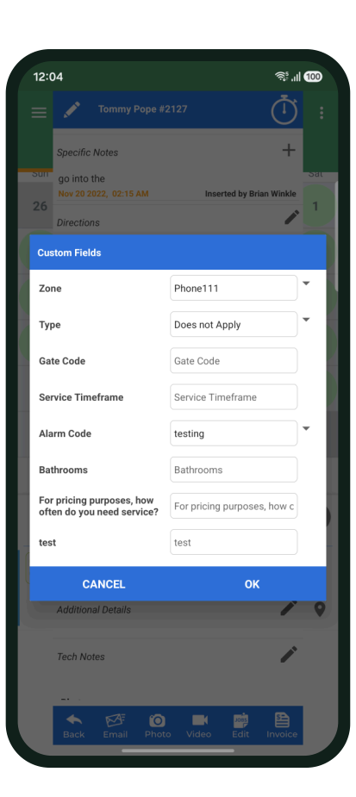
**Customer details**
Contact and address



**Photos & documents**
Saved per customer

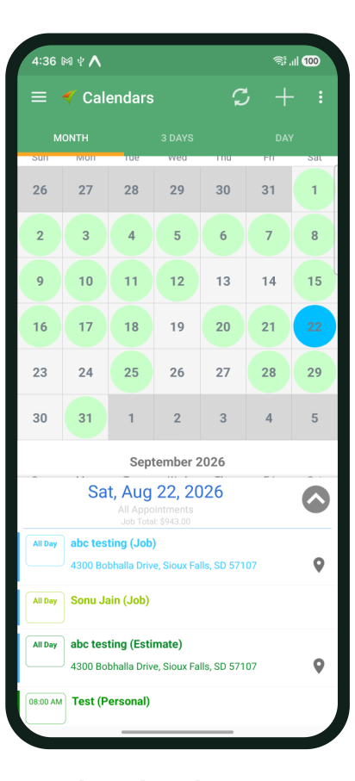


**Current jobs**
Upcoming work



**Custom fields**
Gate codes, zones, rooms

### Scheduling & jobs



**Month calendar**

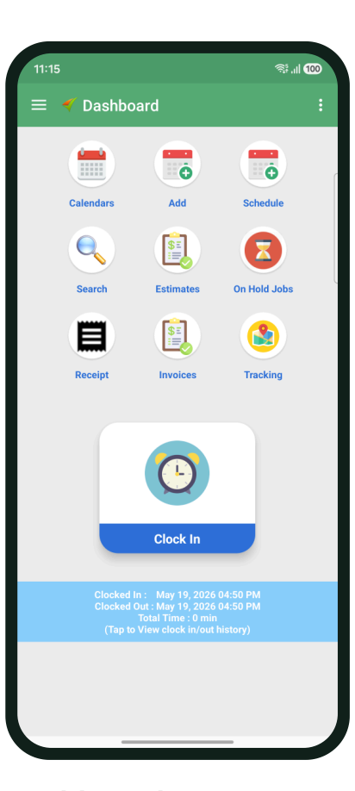
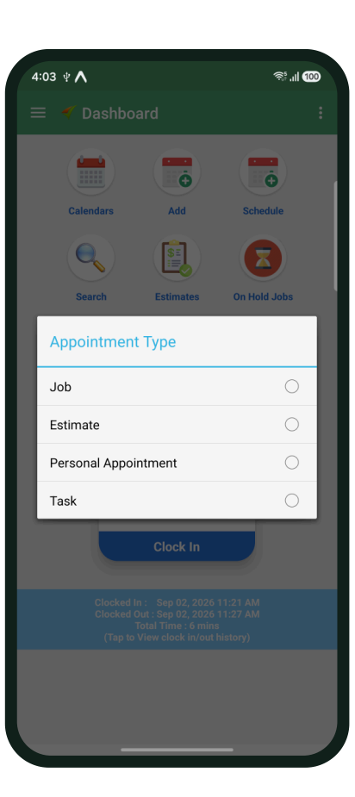
**Tasks**
Assigned to a person

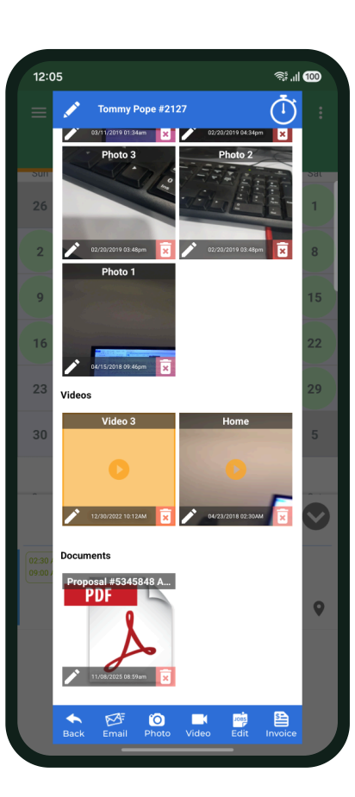
### Field tools



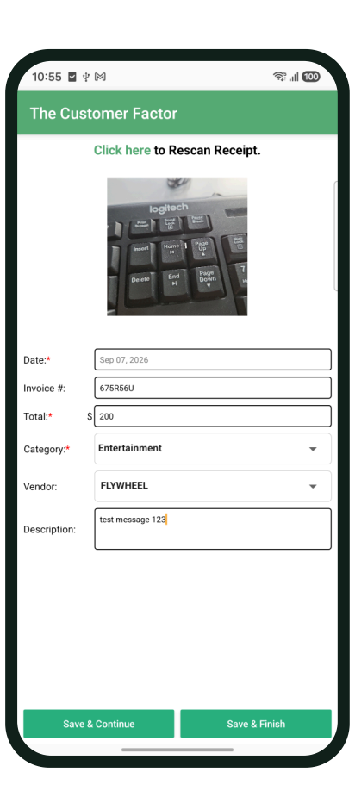
**Dashboard**
Everything one tap away



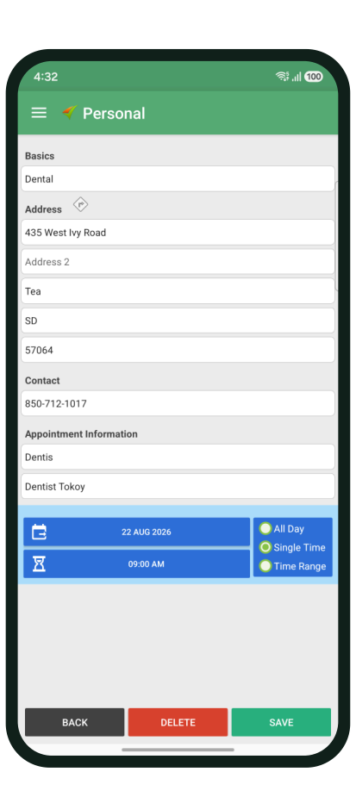
**New appointment**
Job, estimate, task



**Job media**
Photos, video, PDFs



**Expense receipt**
Photo, category, vendor



**Personal time**
Blocked on the calendar

## Technically, what makes it interesting.

What sits underneath the screens, and what it saves a service business every week.

### Repeat work that schedules itself

Each job keeps its own frequency, from weekly to every few years, along with its price. When it's due again it comes back ready to schedule, so no repeat customer is forgotten.

### Real hours, without timesheets

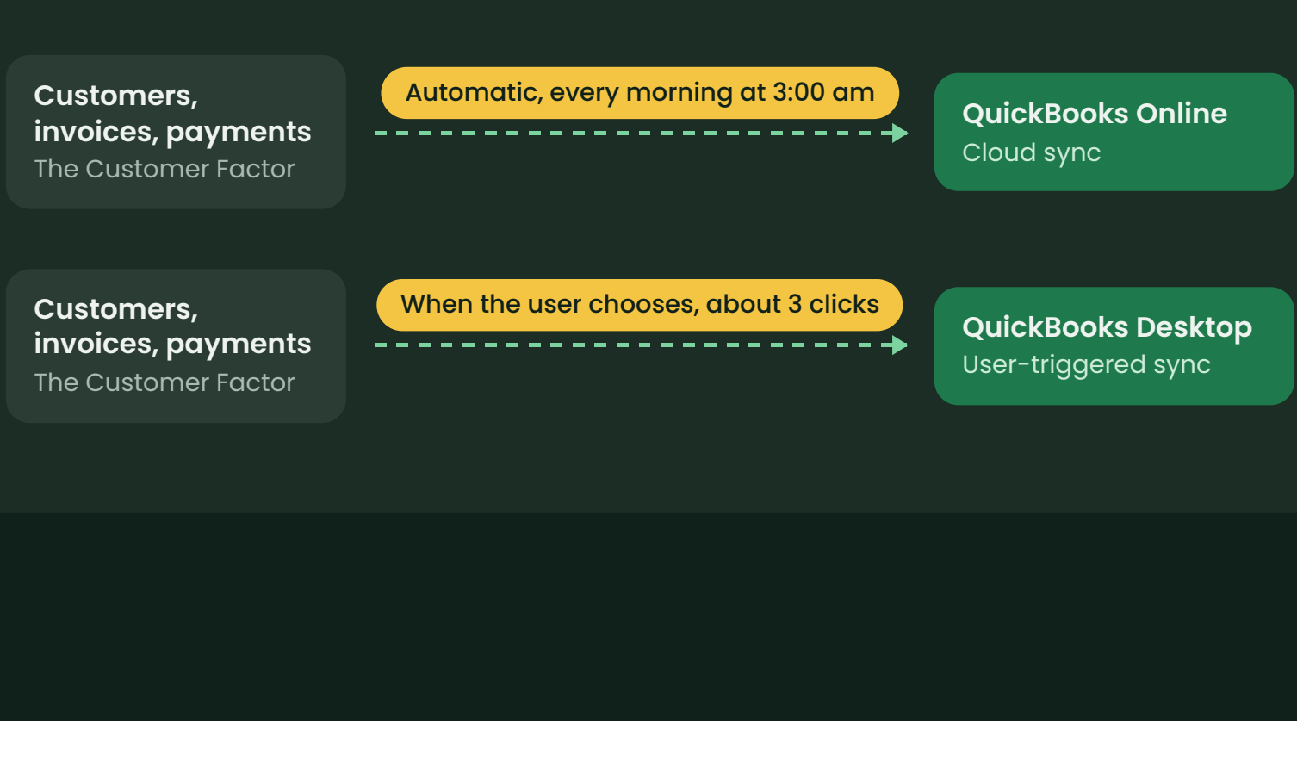
Crews tap travel, arrival, start and finish on each job, and clock-ins and daily routes are logged per employee. The owner sees the real hours worked without collecting a single timesheet.

### One job record for everyone

The office, the crew's app and the customer portal all use the same job. Customers only see what the owner chooses: bookable days, services, past jobs and prices.

### Books that stay up to date

Works with QuickBooks Online and QuickBooks Desktop, with the sync included in the subscription. Card payments and email and text messages are built in, so nothing is typed twice.



**Customers, invoices, payments**
The Customer Factor
Automatic, every morning at 3:00 am
**QuickBooks Online**
Cloud sync

**Customers, invoices, payments**
The Customer Factor
When the user chooses, about 3 clicks
**QuickBooks Desktop**
User-triggered sync

## What users say.

Ratings and feedback from verified reviews on Capterra.

**4.4**/5
