The Customer Factor · Web, iOS & Android

From first quote to QuickBooks, in one app.

Scheduling, estimating and invoicing software built for small service businesses: window cleaning, pressure washing, carpet cleaning and more. Web, iOS and Android, one login, and what goes into building something like it.

Receiving jobs · Estimates by text · Multi-invoicing · QuickBooks sync · Crews · Customer portal

3 surfaces
Office web app, field apps, customer portal

A service business runs on four tools that don't talk.

A one-van window cleaning company still has to quote, schedule crews, track hours, bill, collect and keep the books. Usually that means a paper diary, a typed estimate, a card reader and an evening re-entering everything into QuickBooks.

The usual way

- Rescanning customers live in a phone and someone has to remember who is due this month
- Estimates are typed from scratch and emailed as a PDF nobody opens
- Crews get the day's jobs by phone call or text
- Invoices are written one by one after the work is done
- Every sale is entered a second time in the accounting software

With The Customer Factor

- Recurring work sets the jobs itself. A job post and one dragged onto the schedule
- Estimates are quote-form templates, and go out by email or text
- Jobs are assigned to an employee or a whole crew and show up in their app
- Invoices are created in bulk, saved cards can pay recurring work automatically
- Sales flow into QuickBooks Online overnight, or thereby in a few clicks

Quote, schedule, invoice and sync, without retyping.

The Customer Factor, made by The Customer Factor LLC of Sioux Falls, South Dakota, keeps a service company's customers, jobs, prices and payments in one record. The office plans the work on the web, crews work from iOS and Android apps, and customers can request their next visit through a portal.

It's tuned for businesses whose revenue is mostly repeat visits to the same addresses, rather than for large field service fleets.

Window cleaning · Pressure washing · Carpet cleaning · Maid & cleaning services

Customer requests a quote, or you send by email or text

Drag the job onto a day

Crew sees it on their phone

Mark complete from the mobile app

Send a receipt, or accept card payment

Synced to QuickBooks

Built across three surfaces.

The name customer, job and price list shows up in three places, each shaped for the person using it.

For the owner and office

Web app

Where the business is planned, priced and billed.

- **Job post** of recurring and one-time work, with drag-and-drop scheduling
- **Estimate templates** sent by email or text
- **Bulk invoicing** for all saved cards on file, with one click
- **Employees and crews** that you can be assigned to
- **Service plan pricing** for repeat work

For customers and crews on the road

iOS & Android apps

The day's work is available, with the paperwork done on site.

- Schedule **jobs, estimates, notes** and personal appointments
- **Time tracking** for each job
- **Invoice generation** from the job, in the field
- **Customers and jobs** on the office

For the business's customers

Customer portal

Customers ask for and themselves, inside rules the owner sets.

- Owner picks **which days** can be booked and **which services** can be requested
- Optionally allow **part jobs and pricing**
- Sends an **automatic email and text** after each request, with estimate wording

An estimate becomes a job in one tap. The invoice is sent on one.

How a job works, start to finish.

One window-cleaning customer, followed through the system.

1. **Send the estimate**
   The office picks a template, adjusts the line items and sends it to the customer by text or email.
2. **Put it in the job post**
   Once approved, the work is saved as a recurring job, every 4, 6 or 8 weeks, or as a one-time visit.
3. **Drag it onto the schedule**
   When it's due, the job is dragged onto a day and assigned to an employee or a crew.
4. **Do the work and track the time**
   The crew gets the job on their phone, finishes up and checks it off against the list.
5. **Invoice and get paid**
   The job is invoiced in bulk with the rest of the week, and charged to a saved card if there is one.
6. **Land in the books**
   The sale reaches QuickBooks Online or Sync the next morning, as bookings on the next manual sync.

Field tools

Technically, what makes it interesting.

The hard parts of this kind of product aren't the screens. They are the rules underneath them.

Recurring work as data, not reminders
A window round repeats every 4, 6 or 8 weeks, or on a custom day. A service plans and pricing on the job itself is what tells the job post its next.

Two accounting integrations, one ledger
A scheduled cloud push for QuickBooks Online and a locally triggered sync for Desktop. Both must agree on customers, items and payments, and never post twice.

One record, three business surfaces
Owners, crews and end customers all work from the same customer and job records. Permissions. The portal shows only what the owner allows. Days, services, history and prices.

The two stacks under one login

Two separate backends, one sign-in. Customers, invoices, payments and subscriptions are handled by Stripe, invoiced to Ontraq, so the product's billing is kept apart from the business it's helping run.

What it connects to, and how we'd build it.

On the left, what the product publicly supports. On the right, the stack Ashrill Infosoft would use to build a product like it today. The Customer Factor doesn't publish its own stack, so we don't guess at it.

Platforms & integrations
From the vendor's site and app store listings

- **QuickBooks Online** · Two-way sync, customers, invoices, payments
- **QuickBooks Desktop** · Open customers, invoices, payments
- **Cron processing** · Jobs run in the cloud
- **Email & text** · Receipts, reminders, notifications
- **iOS app** · Field crew and customer
- **Android app** · Field crew and customer

Our recommended build
How Ashrill Infosoft would approach a product like this

- React + TypeScript · Web app
- Flutter · Cross-platform iOS & Android
- Node.js API · Shared by web and mobile
- PostgreSQL · Customers, jobs, invoices
- Stripe · Subscriptions and billing
- Twilio & push · Texts and reminders

What users say.

Feedback from verified Capterra reviews, the good and the honest.

4.4/5
Capterra, 17 verified reviews. 4.6 out of 5 on Feb 2, 2026 via G2.

Value for money	4.4
Features	4.4
Ease of use	4.2
Customer service	4.2

"As affordable and customizable for our type of business as any alternative."
Owner, Cleaning & pressure washing company, verified Capterra reviewer

Where a next version could go further

- **Reporting and analytics.** The most common complaint in reviews is that there's no way to see how the business is doing.
- **Route optimization.** Independent guides note it isn't built in, which matters once a business has several crews.
- **Message delivery.** One reviewer reported client emails not always arriving. A case for delivery tracking.

Available on the web, iOS and Android.

Building software for a service business?

Ashrill Infosoft designs and builds web and mobile products. Recurring scheduling, accounting sync, field apps and customer portals, everything in this case study is the kind of system we build for clients.

Let's talk about it.

hello@ashrillinfosoft.com
sales@ashrillinfosoft.com

Web platforms
Laravel, PHP, MySQL, Bootstrap, Vue.js

iOS & Android apps
Flutter, Dart, one codebase for both platforms

Integrations
Stripe, QuickBooks, Google Maps, Firebase, email and SMS
