Office in the web, crews on iOS and Android

A service business runs on four tools that don't talk.

A small window cleaning company still has to quote, schedule crews, bill, get paid and keep the books. Usually that means 4 paper diary, a typed estimate, a card reader and an evening re-typing it all into QuickBooks.

The usual way

- Recurring customers live in a diary, and remembering next to remember who's due this month
- Estimates are typed from scratch and emailed as attachments
- Crews get the day's jobs by phone call or text
- Invoices are written one by one after the work is done
- Every sale is entered a second time in the accounting software

With The Customer Factor

- Recurring and one-time jobs sort in a job pool that crews can claim from schedule
- Estimates come from templates and go out by email or text
- Jobs are assigned to an employee or a whole crew and they see it on their app
- Invoices are created in bulk, saved cards can charge recurring work automatically
- Sales flow into QuickBooks Online overnight, or desktop in a few clicks

One record for the whole business.

The Customer Factor keeps a service company's customers, jobs, prices and payments together, so the same details are never typed twice.

Window cleaning Pressure washing Carpet cleaning Maid & cleaning services

Built across three surfaces.

The office, the crews and their customers each get a view built for what they do.

For the office and back office

Web app

Where the business is planned, priced and billed.

- **Drag-and-drop scheduling** from the job pool
- **Employee and crews** that jobs can be assigned to
- **Service plan pricing** for repeat work
- **Accounting** linked to QuickBooks Online or Desktop

For the crews in the field

iOS & Android apps

The day's work in a pocket, with the paperwork done on site.

- Schedule **jobs, estimates, tasks** and personal appointments
- **Time tracking** for each job
- **Invoice generation** from the phone
- **Card, Cheque, with daily route** and payment totals
- **Expense receipts** photographed and filed on site

For your customers' peace of mind

Customer portal

Customers can list work themselves, inside rules the owner sets.

- Owner picks **which days** can be booked and **which services** can be requested
- Customers choose **pool jobs** and pay online
- Sends an **automatic email and text** after each request, with editable wording

How a job works, start to finish.

One window-cleaning customer, followed through the product.

1. **Send the estimate**
The office picks a template, adjusts the line items and sends it to the customer by text or email.
2. **Put it in the job pool**
Once approved, it becomes a job: one-time, or repeating on a set frequency.
3. **Drag it onto the schedule**
When it's due, the job is dragged onto a day and assigned to an employee or a crew.
4. **Do the work and track the time**
The crew sees the job in the iOS or Android app and tracks time against it.
5. **Invoice and get paid**
The invoice is sent on the spot by card, check or cash, or a saved card is charged for repeat work.
6. **Land in the books**
The payment flows into QuickBooks with the rest of the day's work.

An estimate becomes a job in one tap; the invoice is paid on site.

The product in action.

Four screens that carry a visit, from the first minute on site to getting paid.

Job details

Everything about the visit, on one screen.

The crew opens a job and has the customer, the place and the history in front of them.

- Address, phone, email, job type and time
- Status set to open, completed or cancelled
- Notes stamped with who added them and when
- Small, photos, video and invoice from one bar

Job timer

Every stage of a visit, timed.

One tap per stage builds an accurate record of the day, without anyone filling in a timesheet.

- Start travel, job arrival, begin job and job completed
- A break button that pauses the clock
- Elapsed time shown against the job

Invoice and signature

Billed and signed before leaving the driveway.

The invoice is generated from the job, and the customer signs on the same phone.

- Invoice built from the job's line items
- Sign, email, text, print or take payment from the invoice
- Signature captured on screen, with an optional name

Online payment

Customers pay from a link.

Open changes go out as a payment page carrying the service company's own name and logo.

- Recent charges listed with dates, status and amount
- Customers tick what they want to pay
- Payment completed by credit card

Every screen, in depth.

The rest of the app, grouped by what each part of the business does in it.

Technically, what makes it interesting.

What sits underneath the screens, and what it saves a service business every week.

Repeat work that schedules itself

Each job keeps its own frequency and price. When it's due again it comes back ready to schedule, with the repeat customer & location.

Real hours, without timesheets

Crews tap travel, arrival, start and finish on each job, and hours on the invoice come pre-logged. No one types a timesheet when we'll have worked.

One job record for everyone

The office, the crew's app and the customer portal all use the same job. Customers only see what's allowed, and the crew only sees the services, past jobs and prices.

Books that stay up to date

Works with QuickBooks Online and QuickBooks Desktop, with the sync included in the subscription. Card payments go straight to your own processor and back in, so nothing is typed twice.
