Admit Infosoft

The Customer Factor

Quote to QuickBooks, in one app.

Scheduling, estimating and invoicing software for small service businesses and the crews who do the work.

- Recurring jobs
- Job time
- Customer portal

4.4/5
Capterra rating from 17 verified reviews

10K+
Android installs on Google Play

Web + mobile
Office or the field, crews on iOS and Android

A service business runs on four tools that don't talk.

A small window cleaning company still has to quote, schedule crews, bill, get paid and keep the books. Usually that means a paper diary, a typed estimate, a card reader and an evening re-typing it all into QuickBooks.

The usual way

- Recurring customers live in a diary, and someone has to remember who is due this month
- Estimates are typed from scratch and emailed as attachments
- Crews get the day's jobs by phone call or text
- Invoices are written one by one after the work is done
- Every sale is entered a second time in the accounting software

With The Customer Factor

- Recurring and one-time jobs wait in a job pool and are dragged onto the schedule
- Estimates come from templates and go out by email or text
- Jobs are assigned to an employee or a whole crew and show up in their app
- Invoices are created in bulk, saved cards can pay recurring work automatically
- Sales flow into QuickBooks Online overnight, or desktop in a few clicks

One record for the whole business.

The Customer Factor keeps a service company's customers, jobs, prices and payments together, so the same details are never typed twice.

It's built around repeat visits, which is why it fits trades where the same customers book again and again.

Window cleaning · Pressure washing · Carpet cleaning

Maid & cleaning services

Built across three surfaces.

The office, the crews and their customers each get a view built for what they do.

For the owner and office

Web app

Where the business is planned, priced and billed.

- Drag-and-drop scheduling for the whole team
- Recurring job templates that plan can be assigned to
- Service pricing by square foot or repeat work
- Accounting linked to QuickBooks Online or Desktop

For crews in the field

iOS & Android apps

The day's work in a pocket, with the paperwork done on site.

- Schedule, jobs, estimates, invoices and customer records synced in real time
- Time tracking for each job
- Invoice generation from the phone
- Check-in/out with daily route and mileage tracking
- Expense receipts photographed and filed on site

For the person who books and pays

Customer portal

Customers ask for work and pay online. Portals take the owner sets.

- Owner picks which days can be booked and which services can be requested
- Optionally shows past jobs and pricing
- Sends an automatic email text when each request with editable wording

How a job works, start to finish.

One window-cleaning customer, followed through the product.

1. **Send the estimate**
The office picks a template, adjusts the line items and sends it to the customer by text or email.
2. **Put it in the job pool**
Once approved, it becomes a job one-time, or repeating on a set frequency.
3. **Drag it onto the schedule**
When it's due, the job is dragged onto a day and assigned to an employee or a crew.
4. **Do the work and track the time**
The crew sees the job in the iOS or Android app and starts the timer when it arrives.
5. **Invoice and get paid**
The invoice is queued on the spot by card, check or cash, or a saved card is charged for repeat work.
6. **Land in the books**
The payment flows into QuickBooks with the rest of the day's work.

An estimate becomes a job in one tap; the invoice is paid on site.

The product in action.

Four screens that carry a visit, from the first minute on site to getting paid.

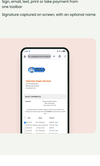

Job details

Everything about the visit, on one screen.

The crew opens a job and has the customer, the place and the history in front of them.

- Address, phone, email, job type and time
- Status set to open, completed or cancelled
- Notes stamped with who added them and when
- Email, photo, video and invoice from one bar

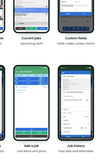

Job timer

Every stage of a visit, timed.

One tap per stage builds an accurate record of the work, without anyone filling in a timesheet.

- Start travel, job arrived, begin job and job completed
- A break button that pauses the clock
- Elapsed time shown against the job

Invoice and signature

Billed and signed before leaving the driveway.

The invoice is generated from the job, and the customer signs on the same phone.

- Invoice built from the job's line items
- Sign, email, text, print or take payment from one toolbar
- Signature captured on screen, with an optional name

Online payment

Customers pay from a link.

Open charges go out as a payment page carrying the service company's own name and logo.

- Recent charges listed with date, status and amount
- Customers tick what they want to pay
- Payment completed by credit card

Every screen, in depth.

The rest of the app, grouped by what each part of the business does in it.

Books that stay up to date

Works with QuickBooks Online and Desktop. Customers, jobs and invoices flow in the right direction, payments and receipts are built in, so nothing is typed twice.

Technically, what makes it interesting.

What are underneath the screens, and what it takes to service business every week.

Repeat work that schedules itself

Each job remembers its frequency and price. When it's due again it comes back ready to schedule, so no repeat customer is forgotten.

Real hours, without timesheets

Crews tap travel, arrival, start and finish on each job, and route me-and-routes are logged per employee, so the owner sees real hours worked.

One job record for everyone

The office, the crew's app and the customer portal all see the same job. Customers only see what the owner chooses to share: dates, services, and jobs and prices.

What users say.
