Works on the web, inside an iOS and Android app

A service business runs on four tools that don't talk.

A small window cleaning company still has to quote, schedule crews, bill, get paid and keep the books. Usually that means a paper diary, a typed estimate, a card reader and an evening re-typing it all into QuickBooks.

The usual way

- Returning customers fax in a diary, and someone has to remember who is due this month.
- Estimates are typed from scratch and emailed as attachments.
- Crews go from a day's jobs to phone call or text
- Invoices are written one by one after the work is done
- Every sale is entered a second time in the accounting software

With The Customer Factor

- Recurring and one-time jobs sort in job post order, so anyone can pick up the day's work.
- Estimates come from templates and go out by email or text.
- Jobs are assigned to an employee or a whole crew and show up on their app.
- Invoices are created in bulk, saved cards can be charged, and reminders go out automatically.
- Notes flow into QuickBooks Online overnight, or desktop in a few clicks.

The Customer Factor keeps a service company's customers, jobs, prices and payments together, so the same details are never typed twice.

It's built around repeat visits, which is why it fits trades where the same customers book again and again.

Window cleaning Pressure washing Carpet cleaning Maid & cleaning services

One record for the whole business.

Quote, book and office

Web app
Where the business is planned, priced and started.

- **Drag-and-drop scheduling** from the job queue
- **Employees and crews** that jobs can be assigned to
- **Service plan pricing** for repeat visits
- **Accounting** linked to QuickBooks Online or Desktop

iOS & Android apps
The day's work in a pocket, with the paperwork done on site.

- Schedule **jobs, estimates, tasks** and personal appointments
- **Time tracking** for each job
- **Invoice generation** from the phone
- **Client lists** you can daily route in Google Maps
- **Expense receipts** photographed and filed on site

Customers and payments

Customer portal
Customers ask for work themselves. Invites rules the owner sets.

- Owner picks **which days** can be booked and **which services** can be requested
- Optionally choose **post-job reviews** or not
- Terms on **automatic email and text** after each request, with editable wording

Built across three surfaces.

The office, the crews and their customers each get a view built for what they do.

How a job works, start to finish.

One window-cleaning customer, followed through the product.

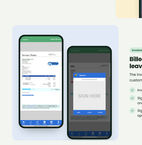

1. **Send the estimate**
The office picks a template, adjusts the line items and sends it to the customer by text or email.
2. **Put it to the job post**
Once approved, it becomes a job: one-time, or repeating on a set frequency.
3. **Drag it onto the schedule**
When it's due, the job is dragged onto a day and assigned to an employee or a crew.
4. **Do the work and track the time**
The crew sees the job in the iOS or Android app and marks it done against a live site.
5. **Invoice and get paid**
The invoice is pulled on the spot to card, check or cash, or a saved card is charged for repeat work.
6. **Land in the books**
The payment flows into QuickBooks with the rest of the day's work.

An estimate becomes a job in one tap. The invoice is paid on site.

The product in action.

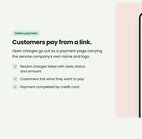

Four screens that carry a visit, from the first minute on site to getting paid.

Job details

Everything about the visit, on one screen.
The crew opens a job and has the customer, the place and the history in front of them.

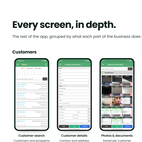

- Address, phone, email, job type and time
- Status set to open, completed or cancelled
- Notes stamped with who added them and when
- Email, photo, video and invoice from one bar

Job timer

Every stage of a visit, timed.
One per-stage buttons on accurate record of the day without anyone filling in a timesheet.

- Start travel, job arrival, begin job and job completed
- A break button that pauses the clock
- Elapsed time shown against the job

Invoice and signature

Billed and signed before leaving the driveway.
The invoice is generated from the job, and the customer signs on the same phone.

- Invoice built from the job's line items
- Sign, email, text, print or take payment from the same screen
- Signature captured on screen, with an optional name

Getting paid work

Customers pay from a link.
Open charges go on a payment page carrying the service company's own name and logo.

- Recent charges listed with date, status and amount
- Customers tick what they want to pay
- Payment completed by credit card

Every screen, in depth.

The rest of the app, grouped by what each part of the business does in it.

Technically, what makes it interesting.

What sits underneath the screens, and what it saves a service business every week.

Repeat work that schedules itself
Each job keeps its own frequency and price. When it's due again it comes back ready to book, and the missed customer is forgotten.

Real hours, without timesheets
Crews tap travel, arrival, start and finish on each job, and close the card. Job costing and payroll hours are the same sheet.

One job record for everyone
The office, the crew's app and the customer portal all use the same job. Edits in one place show up everywhere, and nothing is typed twice.

Books that stay up to date
Works with QuickBooks Online and QuickBooks Desktop, with the sync included in the subscription. Card payments are recorded as they're charged, and bulk, so nothing is typed twice.
