Quote to QuickBooks, in one app.

The Customer Factor is scheduling, estimating and invoicing software for small service businesses: window cleaners, pressure washers, carpet cleaners and maid services. It runs on the web, iOS and Android. This is how it works, and what goes into building something like it.

Gutter clean
13:00 · One-time

Four tools that don't talk to each other.

A one-van window cleaning company still has to quote, schedule crews, track hours, bill, collect and keep the books. Usually that means a paper diary, a typed estimate, a card reader and an evening re-entering everything into QuickBooks.

The usual way

- ✗ Recurring customers live in a diary, and someone has to remember who is due this month
- ✗ Estimates are typed from scratch and emailed as attachments
- ✗ Crews get the day's jobs by phone call or text
- ✗ Invoices are written one by one after the work is done
- ✗ Every sale is entered a second time in the accounting software

With The Customer Factor

- ✓ Recurring and one-time jobs wait in a job pool and are dragged onto the schedule
- ✓ Estimates come from templates and go out by email or text
- ✓ Jobs are assigned to an employee or a whole crew and show up in their app
- ✓ Invoices are created in bulk; saved cards can pay recurring work automatically
- ✓ Sales flow into QuickBooks Online overnight, or Desktop in a few clicks

One record, from quote to books.

The Customer Factor, made by The Customer Factor LLC of Sioux Falls, South Dakota, keeps a service company's customers, jobs, prices and payments in one place. The office plans the week on the web, crews work from iOS and Android apps, and customers request their next visit through a portal.

It's tuned for businesses whose revenue is mostly repeat visits to the same addresses, rather than for large field-service fleets. Built for:

Window cleaning · Pressure washing · Carpet cleaning · Maid & cleaning services

Estimate → **Schedule** → **Assign** → **Work** → **Invoice** → **Books**

Estimate	Schedule	Assign	Work	Invoice	Books
From a template, sent by email or text	Dragged from the job pool onto a day	To an employee or a whole crew	Time tracked in the mobile app	In bulk, or charged to a saved card	Synced to QuickBooks

Built across three surfaces.

The same customer, job and price list shows up in three places, each shaped for the person using it.

Web app

For the owner and office. Where the business is planned, priced and billed.

- ✓ **Job pool** of recurring and one-time work, with drag-and-drop scheduling
- ✓ **Estimate templates** sent by email or text
- ✓ **Bulk invoicing** and saved cards for recurring customers
- ✓ **Employees and crews** that jobs can be assigned to
- ✓ **Service plan pricing** for repeat work

iOS & Android

For technicians in the field. The day's work in a pocket, with the paperwork done on site.

- ✓ Schedule **jobs, estimates, tasks** and personal appointments
- ✓ **Time tracking** for each job
- ✓ **Invoice generation** from the phone
- ✓ Works from the **same customers and jobs** as the office

Customer portal

For the business's customers. Customers ask for work themselves, inside rules the owner sets.

- ✓ Owner picks **which days** can be booked and **which services** can be requested
- ✓ Optionally shows **past jobs and pricing**
- ✓ Sends an **automatic email and text** after each request, with editable wording

One job, start to finish.

A window-cleaning customer, followed through the product.

1 **Send the estimate**
The office picks a template, adjusts the line items and sends it by text or email.

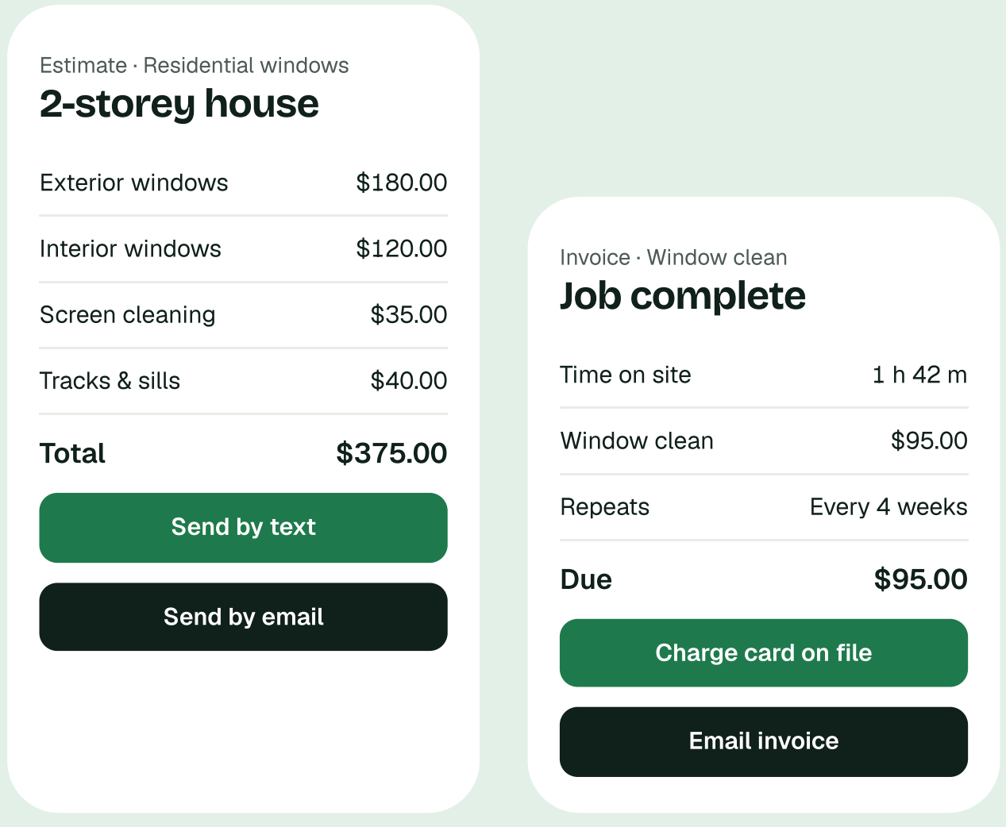
2 **Put it in the job pool**
Once approved, it's saved as recurring work, every 4, 6 or 8 weeks, or as a one-time visit.

3 **Drag it onto the schedule**
When it's due, the job goes onto a day and to an employee or a crew.

4 **Do the work, track the time**
The crew sees the job in the iOS or Android app and tracks time on site.

5 **Invoice and get paid**
It's invoiced in bulk with the rest of the week, and charged to a saved card if there is one.

6 **Land in the books**
The sale reaches QuickBooks Online at 3am the next morning, or Desktop on the next manual sync.



Estimate · Residential windows
2-storey house

Exterior windows	$180.00
Interior windows	$120.00

Customers request the next visit

Only the days and services the owner opens are bookable.

Illustrations by Adroit Infosoft based on the vendor's feature pages and help center. Addresses, prices and job names are examples, not customer data.

Technically, what makes it interesting.

The hard parts of this kind of product aren't the screens. They are the rules underneath them.

Recurring work as data, not reminders

A window round repeats every 4, 6 or 8 weeks. Storing frequency, service plans and pricing on the job itself is what lets the job pool fill itself, instead of someone checking a diary.

Two accounting integrations, one ledger

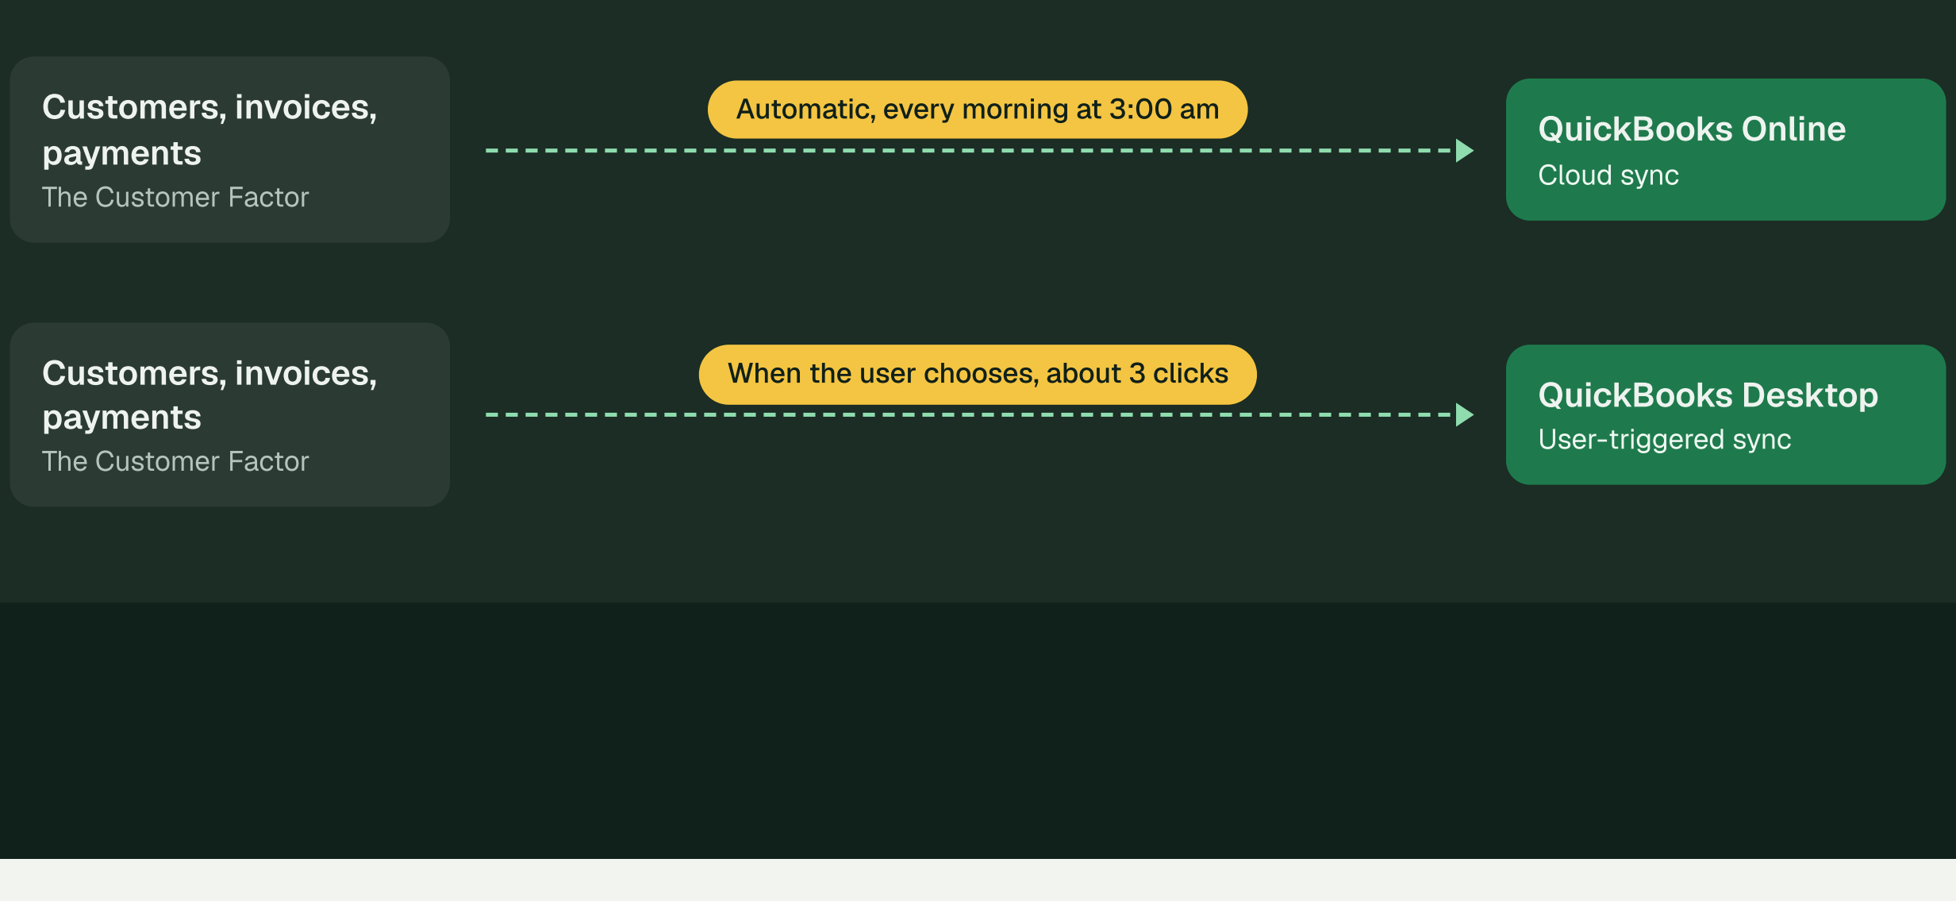
A scheduled cloud push for QuickBooks Online and a user-triggered sync for Desktop. Both have to agree on customers, items and payments, and must never post the same sale twice.

One record, three audiences

Owners, crews and end customers see the same job with different permissions. The portal shows only what the owner allows: bookable days, services, history and prices.

Two roads into the same ledger

Plenty of small businesses still run QuickBooks Desktop while others have moved to Online, so the product supports both, and the sync is included in the subscription.



Customers, invoices, payments
The Customer Factor
Automatic, every morning at 3:00 am
QuickBooks Online
Cloud sync
Customers, invoices, payments

QuickBooks Desktop
User-triggered sync

What it runs on, and how we'd build it.

On the left, what the product publicly supports. On the right, the stack Adroit Infosoft would use for a product like it today. The Customer Factor doesn't publish its own stack, so we don't guess at it.

Platforms & integrations

From the vendor's site and app store listings

Web app	Office scheduling, estimates, invoicing and settings
iOS app	App Store, The Customer Factor LLC; iOS 15 or later
Android app	Google Play, 10K+ installs
QuickBooks Online	Automatic sync every morning
QuickBooks Desktop	User-triggered sync
Payments	Card processing, cards on file, auto-pay
Messaging	Email and text for estimates and portal requests

Our recommended build

How Adroit Infosoft would approach a product like this

React + TypeScript	Office web app
Flutter	One codebase for the iOS and Android field apps
Node.js API	Jobs, billing rules and scheduled syncs
PostgreSQL	Customers, recurring jobs and ledgers
QuickBooks API	Online sync, with a connector for Desktop
Stripe	Saved cards and automatic payments
Twilio + push	Texts to customers, job alerts to crews

What users say.

4.4/5

★★★★☆

Capterra, 17 verified reviews: 14 five-star, 1 three-star and 2 one-star.

Value for money	4.5
Features	4.4
Ease of use	4.2
Customer service	4.1

> "As affordable and customizable for our type of business as any alternative."

Window cleaning business owner, verified review on Capterra

Where a next version could go further

Navigation and search. The most common complaint in reviews is that records are hard to find.

Route optimization. Independent guides note it isn't built in, which matters once a business runs several crews.

Message delivery. One reviewer reported client emails not always arriving, a case for delivery tracking.

Building software for a service business?

Adroit Infosoft designs and builds web and mobile products. Recurring scheduling, accounting sync, field apps and customer portals: everything in this case study is the kind of system we build for clients.
