Adroit Infosoft

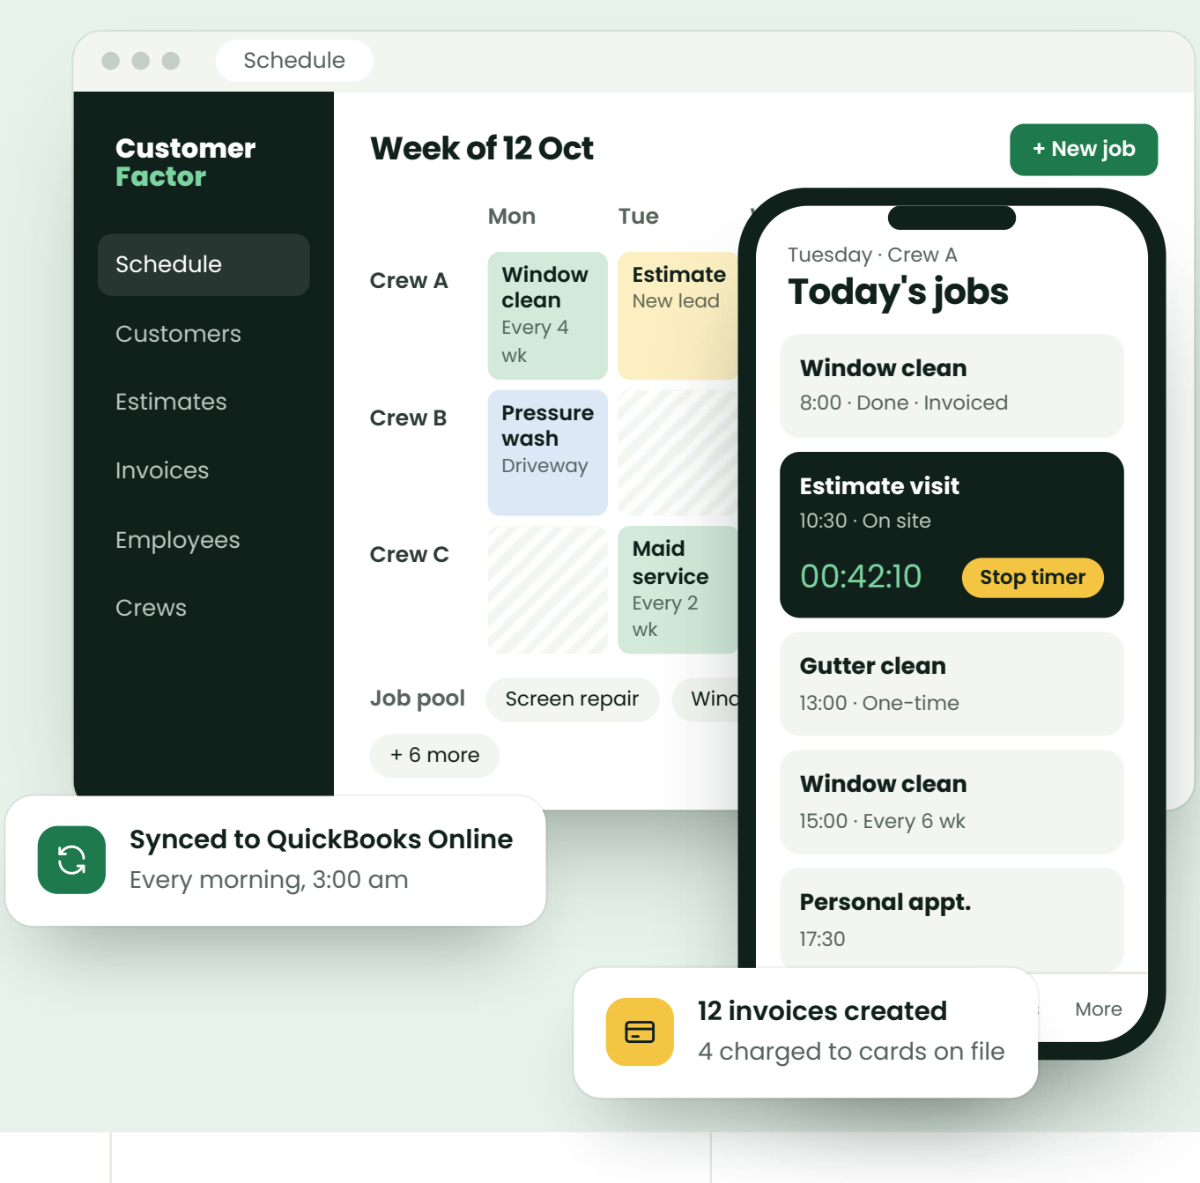
Product case study · October 2026

CF **The Customer Factor** · Web, iOS & Android

From first quote to QuickBooks, in one app.

Scheduling, estimating and invoicing software built for small service businesses: window cleaners, pressure washers, carpet cleaners and maid services. Here's how it works, and what goes into building something like it.

- Recurring jobs
- Estimates by text
- Bulk invoicing
- QuickBooks sync
- Crews
- Customer portal



Tuesday · Crew A
Today's jobs

- **Window clean** 8:00 · Done · Invoiced
- **Estimate visit** 10:30 · On site 00:42:10 Stop timer
- **Gutter clean** 13:00 · One-time
- **Window clean** 15:00 · Every 6 wk
- **Personal appt.** 17:30

Synced to QuickBooks Online
Every morning, 3:00 am

12 invoices created
4 charged to cards on file

4.4/5	**10K+**	**QuickBooks**	**3 surfaces**
Capterra rating from 17 verified reviews	Android installs on Google Play	Online and Desktop sync, included in the subscription	Office web app, field apps, customer portal

A service business runs on four tools that don't talk.

A one-van window cleaning company still has to quote, schedule crews, track hours, bill, collect and keep the books. Usually that means a paper diary, a typed estimate, a card reader and an evening re-entering everything into QuickBooks.

The usual way

- ✗ Recurring customers live in a diary, and someone has to remember who is due this month
- ✗ Estimates are typed from scratch and emailed as attachments
- ✗ Crews get the day's jobs by phone call or text
- ✗ Invoices are written one by one after the work is done
- ✗ Every sale is entered a second time in the accounting software

With The Customer Factor

- ✓ Recurring and one-time jobs wait in a job pool and are dragged onto the schedule
- ✓ Estimates come from templates and go out by email or text
- ✓ Jobs are assigned to an employee or a whole crew and show up in their app
- ✓ Invoices are created in bulk; saved cards can pay recurring work automatically
- ✓ Sales flow into QuickBooks Online overnight, or Desktop in a few clicks

Quote, schedule, invoice and sync, without retyping.

The Customer Factor, made by The Customer Factor LLC of Sioux Falls, South Dakota, keeps a service company's customers, jobs, prices and payments in one record. The office plans the week on the web, crews work from iOS and Android apps, and customers can request their next visit through a portal.

It's tuned for businesses whose revenue is mostly repeat visits to the same addresses, rather than for large field-service fleets.

- Window cleaning
- Pressure washing
- Carpet cleaning
- Maid & cleaning services

Estimate	Schedule	Assign	Do the work	Invoice & pay	Books
From a template, sent by email or text	Dragged from the job pool onto a day	To an employee or a crew	Time tracked in the mobile app	In bulk, or charged to a saved card	Synced to QuickBooks

Built across three surfaces.

The same customer, job and price list shows up in three places, each shaped for the person using it.

For the owner and office
Web app
Where the business is planned, priced and billed.

- ✓ **Job pool** of recurring and one-time work, with drag-and-drop scheduling
- ✓ **Estimate templates** sent by email or text
- ✓ **Bulk invoicing** and saved cards for recurring customers
- ✓ **Employees and crews** that jobs can be assigned to
- ✓ **Service plan pricing** for repeat work

For technicians in the field
iOS & Android apps
The day's work in a pocket, with the paperwork done on site.

- ✓ Schedule **jobs, estimates, tasks** and personal appointments
- ✓ **Time tracking** for each job
- ✓ **Invoice generation** from the phone
- ✓ Works from the **same customers and jobs** as the office

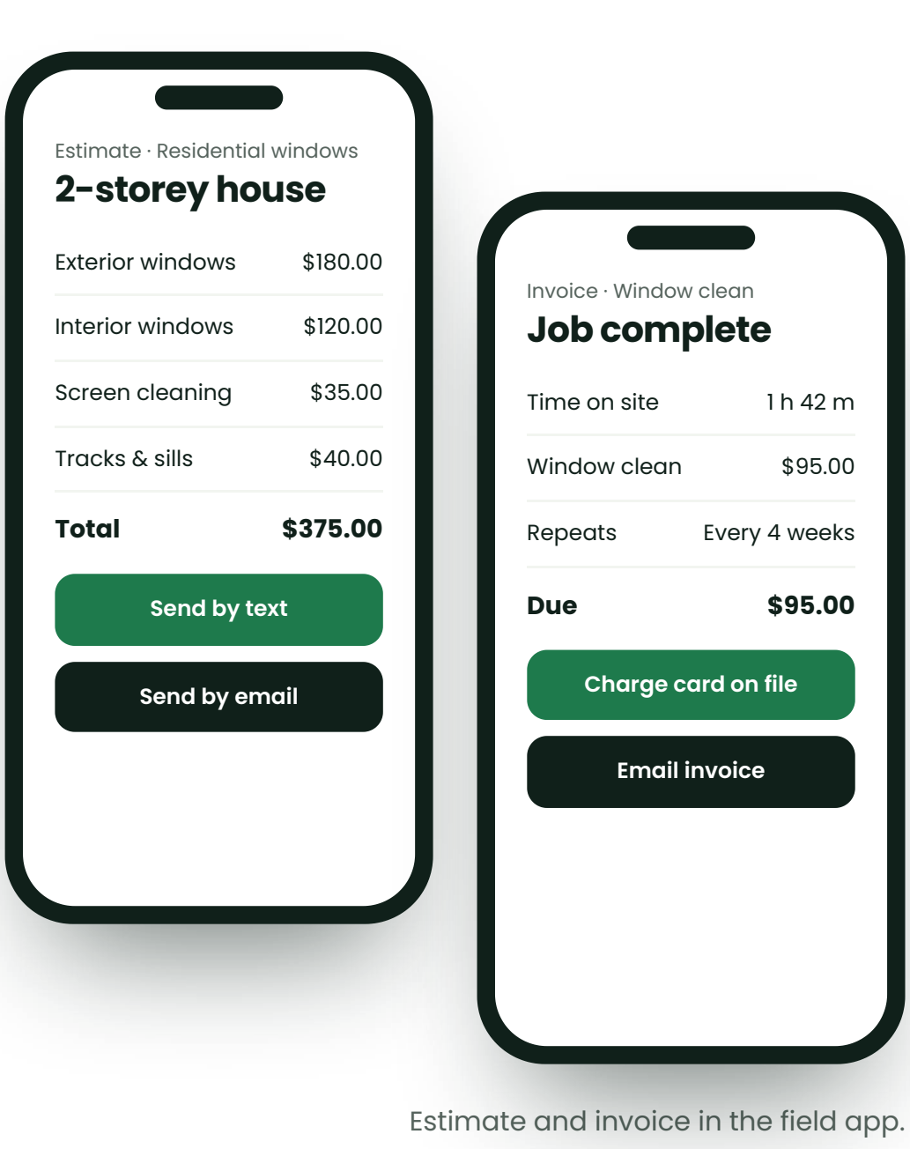
For the business's customers
Customer portal
Customers ask for work themselves, inside rules the owner sets.

- ✓ Owner picks **which days** can be booked and **which services** can be requested
- ✓ Optionally shows **past jobs and pricing**
- ✓ Sends an **automatic email and text** after each request, with editable wording

How a job works, start to finish.

One window-cleaning customer, followed through the product.

1. **Send the estimate**
   The office picks a template, adjusts the line items and sends it to the customer by text or email.
2. **Put it in the job pool**
   Once approved, the work is saved as a recurring job, every 4, 6 or 8 weeks, or as a one-time visit.
3. **Drag it onto the schedule**
   When it's due, the job is dragged onto a day and assigned to an employee or a crew.
4. **Do the work and track the time**
   The crew sees the job in the iOS or Android app and tracks time against it on site.
5. **Invoice and get paid**
   The job is invoiced in bulk with the rest of the week, and charged to a saved card if there is one.
6. **Land in the books**
   The sale reaches QuickBooks Online at 3am the next morning, or Desktop on the next manual sync.



Estimate · Residential windows
2-storey house

Exterior windows	$180.00
Interior windows	$120.00
Screen cleaning	$35.00
Tracks & sills	$40.00
Total	**$375.00**

Invoice · Window clean
Job complete

Time on site	1 h 42 m
Window clean	$95.00
Repeats	Every 4 weeks
Due	**$95.00**

Technically, what makes it interesting.

The hard parts of this kind of product aren't the screens. They are the rules underneath them.

Recurring work as data, not reminders
A window round repeats every 4, 6 or 8 weeks. Storing frequency, service plans and pricing on the job itself is what lets the job pool fill itself.

Two accounting integrations, one ledger
A scheduled cloud push for QuickBooks Online and a user-triggered sync for Desktop. Both must agree on customers, items and payments, and never post twice.

One record, three audiences
Owners, crews and end customers see the same job with different permissions. The portal shows only what the owner allows: days, services, history and prices.

Two roads into the same ledger
Plenty of small businesses still run QuickBooks Desktop while others have moved to Online, so the product supports both, and the sync is included in the subscription.

Customers, invoices, payments — The Customer Factor → Automatic, every morning at 3:00 am → **QuickBooks Online** — Cloud sync

Customers, invoices, payments — The Customer Factor → When the user chooses, about 3 clicks → **QuickBooks Desktop** — User-triggered sync

What it connects to, and how we'd build it.

On the left, what the product publicly supports. On the right, the stack Adroit Infosoft would use to build a product like it today. The Customer Factor doesn't publish its own stack, so we don't guess at it.

Platforms & integrations
From the vendor's site and app store listings

QuickBooks Online Nightly automatic sync	**QuickBooks Desktop** User-triggered sync
Card processing Cards on file, auto-pay	**Email & text** Estimates, portal confirmations
iOS app Requires iOS 15 or later	**Android app** 10K+ installs

Our recommended build
How Adroit Infosoft would approach a product like this

React + TypeScript Office web app	**Flutter** One codebase for iOS & Android
Node.js API Jobs, billing, scheduled syncs	**PostgreSQL** Customers, jobs, ledgers
Stripe Saved cards and auto-pay	**Twilio & push** Texts and job alerts

What users say.

Feedback from verified Capterra reviews, the good and the honest.

4.4/5

★★★★★

Capterra, 17 verified reviews: 14 five-star, 1 three-star, 2 one-star.

Value for money	4.5
Features	4.4
Ease of use	4.2
Customer service	4.1

> "As affordable and customizable for our type of business as any alternative."
>
> Window cleaning business owner, verified review on Capterra

Where a next version could go further

- **Navigation and search.** The most common complaint in reviews is that records are hard to find.
- **Route optimization.** Independent guides note it isn't built in, which matters once a business runs several crews.
- **Message delivery.** One reviewer reported client emails not always arriving, a case for delivery tracking.

Available on the web, iOS and Android.
